# **The role of the gaseous signaling molecule hydrogen sulfide in chronic liver disease**

Special emphasis on non-alcoholic fatty liver disease

**Turtushikh Damba**

This work was funded by Mongolian State Training fund and Groningen University Institute for Drug Exploration (GUIDE), Graduate School of Medical Sciences (GSMS), University Medical Center Groningen, University of Groningen, Groningen, the Netherlands.

The printing of thesis was financially supported by the following organizations:

Graduate School of Medical Sciences  
Nederlandse vereniging voor Hepatologie (NVH)  
Centre for East Asian Studies Groningen (CEASG)

The authors gratefully acknowledges the financial support for printing of this thesis

# **The role of the gaseous signaling molecule hydrogen sulfide in chronic liver disease**

Special emphasis on non-alcoholic fatty liver disease

## **PhD thesis**

to obtain the degree of PhD at the  
 University of Groningen  
 on the authority of the  
 Rector Magnificus Prof. C. Wijmenga  
 and in accordance with  
 the decision by the College of Deans.

This thesis will be defended in public on

Monday 7<sup>th</sup> of September 2020 at 14:30 hours

by

**Turtushikh Damba**

born on 17 March 1988  
 in Ulaanbaatar, Mongolia

**Promotores**

Prof. dr. A.J. Moshage

Prof. dr. H. van Goor

**Assessment committee**

Prof. dr. Rob Henning

Prof. dr. Peter Olinga

Prof. dr. Jonel Trebicka

**Paranimfen**

## Contents

<b>Chapter 1</b>	General introduction and scope of the thesis	9
<b>Chapter 2</b>	Role of gasotransmitter hydrogen sulfide (H <sub>2</sub> S) on free fatty acids metabolism during progression of steatosis	31
<b>Chapter 3</b>	Oxidative Stress Is Associated with Suspected Non-Alcoholic Fatty Liver Disease and All-Cause Mortality in the General Population	51
<b>Chapter 4</b>	Hydrogen sulfide stimulates activation of hepatic stellate cells through increased cellular bio-energetics	77
<b>Chapter 5</b>	Inhibition of endogenous hydrogen sulfide reduces hepatic stellate cells activation via induction of cellular senescence	97
<b>Chapter 6</b>	Bioactive coumarin-derivative esculetin decreases hepatic stellate cell activation via induction of cellular senescence via the PI3K-Akt-GSK3 $\beta$ pathway	117
<b>Chapter 7</b>	General discussion and future perspectives	141
<b>Appendices</b>	Abbreviations	156
	Summary and Nederlandse Samenvatting	159
	Author affiliations	163
	Acknowledgements	164
	Biography	168
