The authors regret that there is an error in their references referred to in their original article.

Furthermore, on page 1524, reference 41 should be changed to reference 57 so that the correct paragraph reads as follows:

“According to Pieterse et al. [57] complex medical language does not affect measures of perceived efficacy, but when a patient expresses low confidence in understanding medical terms this might be an indication to explore the patient's interest in a coach.” The authors would like to apologise for any inconvenience caused.
