Antidepressant use during pregnancy

Exploring novel (neuro)biological effects in rat
mothers and offspring

Proefschrift

ter verkrijging van de graad van doctor aan de
Rijksuniversiteit Groningen
op gezag van de
rector magnificus prof. dr. C. Wijmenga
en volgens besluit van het College voor Promoties.

De openbare verdediging zal plaatsvinden op
maandag 28 september 2020 om 18.00 uur

door

Anouschka Sophie Ramsteijn

geboren op 28 januari 1991
te Rijswijk

Promotores

Prof. dr. J.D.A. Olivier

Prof. dr. G. van Dijk

Copromotor

Dr. S.F. de Boer

Beoordelingscommissie

Prof. dr. M.G. Rots

Prof. dr. A.D. Kraneveld

Prof. dr. I. Sundström Poromaa

Voor Annemieke, Nellie en Annie

4 generaties, 1991

Contents

Chapter 1	General introduction	9
Chapter 2	Perinatal selective serotonin reuptake inhibitor exposure and behavioral outcomes: a systematic review and meta-analyses of animal studies	31
Chapter 3	Serotonin transporter genotype modulates the gut microbiota composition in young rats, an effect augmented by early life stress	109
Chapter 4	Antidepressant treatment with fluoxetine modulates the gut microbiome and metabolome during pregnancy and lactation in rats with a depressive-like phenotype	133
Chapter 5	The effect of selective serotonin reuptake inhibitor antidepressants and maternal adversity on gene expression in the placenta	171
Chapter 6	Perinatal exposure to fluoxetine and maternal adversity interact to affect myelin-related gene expression in the corticolimbic circuitry of juvenile rats	187
Chapter 7	General discussion	223
Appendix I	English summary	245
Appendix II	Nederlandse samenvatting	249
Appendix III	Dankwoord	253
Appendix IV	Short resume	256
Appendix V	Publications	257
