geboren op 1 januari 1968  
te Asmara (Eritrea)

Promotores: Prof. Dr. Ir. C. Schweigman  
Prof. Dr. A.J. M. Schoot Uiterkamp  
Prof. Dr. B.W. Lensink

Co-promotor: Dr. S. Nonhebel

Beoordelingscommissie : Prof.dr. J. B. Opschoor  
Prof.dr. C.J. Jepma  
Prof.dr. J. van Andel

## Acknowledgements

I owe much gratitude to many people for their help and friendship during my stay in the Netherlands. A great number of people have contributed to this book in one way or another, and I would like to take the opportunity to mention several of them. First, however, I would like to express my deepest gratitude to the Netherlands' Universities Foundation for International Co-operation (NUFFIC) for financing my research. I gratefully acknowledge also the College of Business and Economics, University of Asmara for giving me a study leave to pursue my Ph.D. research.

I am greatly indebted to my Promotors Prof. Caspar Schweigman, Prof. Ton Schoot Uiterkamp, Prof Robert Lensink and Dr. Sanderine Nonhebel for their continuous support and encouragement. Their professional advice and constructive suggestions were essential for this thesis. Especially, I would like to thank Caspar for his great interest in this study and his close guidance throughout the years of my study. Without his support, this study would not have come to completion. His enthusiasm and friendliness were also constant sources of encouragement.

I would like to gratefully acknowledge Dr. Huib Hengsdijk of Plant Research International, Wageningen University, for allowing me to use his TCG software and for spending considerable time in generating relevant data using parameters representing the conditions in the Central Highlands of Eritrea. I also thank Dr. Ruerd Ruben and Dr. Kees Praagman for their comments on the statistical analysis of the data. Special thanks as well to Yoeri Zwols for his assistance with the GAMS software.

Many people have helped me during my fieldwork in Eritrea. I would like to specially mention Dr Woldesellasi Ogbazghi, head of the Department of Land Resource and Environment at the University of Asmara and his senior undergraduate students, as well as Mr. Dawit Ghiorgis, head of Planning Department in the Ministry of Agriculture. I also want to thank Mr. Senai Woldeab, Mr. Abraham Gebrekirstos and my brothers, Tsegai, Fessehazion and Habtom for their help with data collection.

The CDS staff, Mr. Arthur de Boer, Mr. Hans Paul Klijnsma and Dr. Pieter Boele van Hensbroek deserve my gratitude for the lively environment they created for me both at the office and outside. I would also like to extend my gratitude to Dr. Clemens Lutz and to members of the Office for International Relations, Madeleine, Eric, Marieke and Anita. I would like also to thank all my

friends who made my study life in the Netherlands easy and enjoyable. Special thanks to my friends Maarten van Ommen, Asmerom Atewabrhan, Bereket Mehari and Fitsum Ghebregiorgis.

I am forever indebted to my father Araya Tesfamicael and my mother Abrehet Ghebrewold for being the wonderful loving and caring parents that they are and for making sure that I continued my study even at the most difficult times. Last, but certainly not least, my heartfelt thanks to my wife, Tigisti Mshghna and my children Yafet and Batseba. Tigisti has always been of great moral support and happily took the burden of family responsibility so that I could concentrate on my study.

*“Ebenezer... thus far has the Lord helped us”* (1 samuel 7:12). I am grateful to God for helping me to see a successful conclusion of this long journey.

Bereket Araya

## Table of Contents

<i>Acknowledgements</i>	<i>i</i>
<i>List of Tables</i>	<i>ix</i>
<i>List of Figures</i>	<i>xiii</i>
<i>List of Abbreviations</i>	<i>xv</i>
<b>Chapter 1 Introduction</b>	<b>1</b>
1.1 Background of the study	1
1.2 Statement of the problem	2
1.3 Objectives of the study	4
1.4 Methodology of the study	4
1.5 Organization of the study	6
<b>Chapter 2 Agricultural Intensification, Agricultural Productivity and Land Degradation in Africa</b>	<b>9</b>
2.1 Introduction	9
2.2 Performance of agriculture in Africa	10
2.3 Land degradation	12
2.4 Agricultural intensification	14
2.5 Understanding farmers' decisions for agricultural intensification	17
2.5.1 Poverty and land degradation	18
2.5.2 Land tenure and land degradation	19
<b>Chapter 3 Agriculture, Energy and Land Degradation in Eritrea</b>	<b>23</b>
3.1 Introduction	23
3.2 The state of Eritrean agriculture	23
3.2.1 Land size and land use	23
3.2.2 Crop production	25
3.2.3 Livestock	30
3.3 Energy and forestry in Eritrea	31
3.3.1 Energy	32
3.3.2 Forests and woodlands	33
3.4 Land degradation	37
3.5 The causes of land degradation in Eritrea	39
3.5.1 Direct causes of land degradation	39
3.5.2 Indirect causes of land degradation	43
3.6 Summary	49

<b>Chapter 4</b>	<b>Model Structure and Approach</b>	51
4.1	Introduction	51
4.2	Theoretical foundations of farm household modelling	51
4.3	Bio-economic modelling approaches	53
4.3.1	Classification of bio-economic models	53
4.4	The structure and major components of the BEM of the farming system in the Highlands of Eritrea	55
4.4.1	Structure of the bio-economic model	56
4.4.2	Interactions between various components of the model	57
4.4.3	Socio-economic components of the bio-economic model	59
4.4.4	Biophysical components of the bio-economic model	61
4.5	Conclusions	62
<b>Chapter 5</b>	<b>The Field Research</b>	65
5.1	Introduction	65
5.2	Methodology of the field research	65
5.2.1	General farm household survey	66
5.2.2	In-depth farm household survey	67
5.2.3	Field measurements	67
5.3	The research area and the research villages	68
5.3.1	The Central Highlands of Eritrea	68
5.3.2	The research villages	70
5.4	Household resources	74
5.4.1	Labour	74
5.4.2	Land	76
5.5	Crop production	78
5.5.1	Crop yield	79
5.5.2	Labour and oxen requirement	81
5.5.3	Land management practices	83
5.6	Livestock	87
5.7	Tree planting	90
5.8	Summary	91
<b>Chapter 6</b>	<b>Bio-economic Model of the Farming Systems in the Highlands of Eritrea</b>	93
6.1	Introduction	93
6.2	Mathematical modelling of the farming systems	93
6.3	The planning year and the planning period	94
6.4	Land use decisions and land constraints	95
6.4.1	Tree growth and the land constraints	99
6.5	Crop production and consumption modelling	102
6.5.1	Crop residues	103
6.5.2	Consumption, buying and selling of crops	105

6.6	Wood and grass production	106
6.6.1	Grass production	108
6.7	Livestock modelling	109
6.7.1	Feed availability and livestock	110
6.7.2	Animal power requirement and livestock	111
6.7.3	Milk production	113
6.7.4	Manure production and use	113
6.8	Fertilizer balance	114
6.9	Energy modelling	116
6.10	Population and labour	116
6.11	Cash constraint	119
6.12	Land management, crop yield, soil and nutrient loss	122
6.13	Objective function	123
<b>Chapter 7 Estimating Model Parameters</b>		<b>125</b>
7.1	Introduction	125
7.2	Land	125
7.3	Labour supply and requirement	126
7.3.1	Labour supply	126
7.3.2	Labour requirements	128
7.4	Crop yields and agricultural technologies	130
7.4.1	The Technical Coefficient Generator	131
7.4.2	A statistical analysis of results from TCG	134
7.5	Sustainability indicators	135
7.5.1	Soil erosion	135
7.5.2	Nitrogen balance	138
7.6	Inputs and outputs of livestock activities	141
7.7	Grass and wood production	143
7.7.1	Grass production	143
7.7.2	Wood production	144
7.8	Food and fuel requirements	145
7.8.1	Food requirement and consumption patterns	145
7.8.2	Fuel: level and composition	146
7.9	Some empirical evidences	147
7.9.1	Fertilizer and crop yield	147
7.9.2	Estimation of soil loss and run-off	149
7.9.3	Soil conservation and crop yield	155
7.10	Prices	158
7.11	Conclusions	159

<b>Chapter 8</b>	<b>Base Run and Sensitivity Analysis</b>	161
8.1	Introduction	161
8.2	Results of the base model	161
	8.2.1 Land use	163
	8.2.2 Soil conservation	169
	8.2.3 Organic and inorganic fertilizers	170
8.3	Livestock	171
8.4	Soil erosion and nitrogen balance	173
	8.4.1 Soil erosion	173
	8.4.2 Nitrogen loss	174
8.5	Income	175
8.6	Sensitivity analysis for some parameters	176
8.7	Household-level model	177
	8.7.1 Results of the household model	179
8.8	Conclusions	182
<b>Chapter 9</b>	<b>Discussion of Model Results: Scenario Analysis</b>	183
9.1	Introduction	183
9.2	Scenario 1. Removal of subsidy on fertilizer	184
9.3	Scenario 2. Introduction of energy saving stoves	186
9.4	Scenario 3. Mechanization	188
9.5	Scenario 4. Irrigation	190
9.6	Scenario 5. Food aid for soil conservation and tree planting	191
	9.6.1 Scenario 5.1 FFW for soil conservation	192
	9.6.2 Scenario 5.2 FFW for tree planting	194
<b>Chapter 10</b>	<b>Summary and Conclusions</b>	197
10.1	Introduction	197
10.2	Some socio-economic and biophysical features	199
10.3	Modelling land use and land management decisions	201
10.4	Some observation from the field studies	203
10.5	Land use and land management decisions: Results from the base run model	204
10.6	Results of alternative technologies and interventions	206
10.7	Final remarks and policy recommendations	208
