Microvillus Inclusion Disease
Lessons about the apical plasma membrane

Magdalena R. Golachowska

This research was financially supported by the University of Groningen
University Medical Center Groningen

The research described in this dissertation was conducted at the Department of
Cell Biology, section Membrane Cell Biology, University Medical Center
Groningen, University of Groningen, Groningen, The Netherlands

This thesis is available at the Library of University of Groningen.

Printing of this thesis was financially supported by:

RijksUniversiteit Groningen, University Medical Center Groningen
Graduate School for Drug Exploration (GUIDE)
Nederlandse Vereniging voor Gastro-Enterologie (NVGE)
Sectie Experimentele Gastroenterologie (SEG) of the NVGE

Printed by: GS Media, Wroclaw, Poland

CONTENTS

Chapter 1	The epithelial apical plasma membrane: structure-function relationships and dynamics at the molecular level	13
Chapter 2	Functional characterization of mutations in the myosin Vb gene associated with microvillus inclusion disease	37
Chapter 3	Divergent effects of <i>MYO5B</i> mutations on apical brush border and apical recycling endosome organization in kidney and intestinal epithelial cells of Microvillus Inclusion Disease patients presenting with renal Fanconi syndrome	65
Chapter 4	Extracellular acidosis induces Rho Kinase/myosin-II-mediated vacuolarization of the apical plasma membrane and formation of intracytoplasmic apical vacuoles	85
Chapter 5	The complex organization and apical positioning of the Golgi complex is dispensable for polarized apical trafficking and polarity in hepatoma HepG2 cells at steady state	109
Chapter 6	Recycling endosomes in apical plasma membrane domain formation and epithelial cell polarity	131
Chapter 7	Summary, Discussion and Perspectives	151
	Nederlandse samenvatting	157
	Streszczenie w języku polskim	161
	References	167
	Appendix 1 (Supplementary Figures for Chapter 2)	195
	Appendix 2 (Supplementary Figures for Chapter 4)	205
	Acknowledgements	209
