Acknowledgments
Writing this thesis has been one of the greatest adventures of my life.

It has taken a path that can be compared to a roller coaster ride. In the beginning I was apprehensive and not at all certain that this was a ride that I wanted to take. But, before I knew it, I had stepped aboard the Thesis Roller Coaster and the ride had taken off. The TRC takes you through adrenaline-filled highs and plummeting lows, you loop around in circles and at times wish you could just stop the ride and get out. Just when you think you can't take any more, the ride picks up again and you start moving towards yet another exhilarating peak. The world rushes by, and you start seeing things from an exciting and new perspective. Then before you know it, it is over and you have rolled to the end. You are left with the most incredible rush and the feeling that it was all worthwhile.

Like any roller-coaster, you never ride alone on the TRC. To get to the end, involves commitment and support from a whole team and without the team, I would never have reached the end of my ride.

Firstly I would like to thank my primary supervisor, Professor Flora Haaijer-Ruskamp. Flora, you were the one who convinced me to give research a try and the one who has supported me through all the highs and the lows. You have taught me how to do good research and have shown me how rewarding research can be. You have not only been my scientific mentor, but also my friend. Flora, for all of this I thank you.

I would also like to thank my two other supervisors, Professor Wiek van Gilst and Professor Thys van der Molen. Wiek, you taught me how important it is to stay focussed and to simplify things wherever possible. Thys, your enthusiasm never flagged. I always left your office more motivated and enthusiastic about our research than when I entered it.

I have also been privileged enough to have supportive and motivating colleagues and friends. Two of my most supportive colleagues during the past four years have been my nympettes, Willeke Kasje and Ceciel Aarnoudse. Willeke and Ceceil, I couldn't have made it without you. We started the ride together and now we are finishing it together. From the very first day we have been great friends and I can't begin to tell you how much you friendship and support means to me.

To my other colleagues I would also like to say thank you. Petra Denig, your input has been invaluable. I have really enjoyed working and conferencing with you. You have taught me how good research should be done and together we managed to find ingenious solutions to baffling problems time and time again. Nynke Veninga, the beginning of my ride came at the end of
yours, yet you always had time to help me, not only with work but also with learning to live in the Netherlands. Iris Kindt, starting work almost on the same day meant that we were destined to be friends and I have really valued having you as a friend and colleague. Annemarieke Loot, a special thanks for translating my summary into Dutch. I am still impressed with how quickly and carefully you did it. Charlot van der Hoeven I thank you for your unending support, your willingness to help solve any problem and your inspirational outlook on life.

I would also like to thank my colleagues within the department of Clinical Pharmacology who have helped make the past four years so enjoyable. I would especially like to thank Professor Dick de Zeeuw whose door was always open and who was always ready with a helpful word and a smile. Wessel Sloof, a huge thank you for managing to save my computer every time I got in to trouble trying to fix it myself. My colleagues from our small but powerful Rational Drug Use Group, Peter, Prashant, Jacoba and Heidrun, thank you for your valuable comments. I would also like to thank my colleagues from Social Pharmacy and Pharmacoepidemiology for your valuable input and comments over the past four years during our fortnightly dRUGS meetings.

Of course, none of this research could have taken place without the contributions of the general practitioners and researchers participating in the Registratie Netwerk Groningen (RNG), Integrated Primary Care Information (IPCI) and the IMPROVEMENT study. In particular, I would like to thank Miriam Sturkenboom for her help with the IPCI data. I would also like to thank my co-authors Dr Dirk Lok and Dr Hans Kragten as well as the members of the Dutch Working group on heart failure for their valuable contributions to this thesis. I would like to thank Ger van der Werf who shared with me his insight into the world of general practice and Willem Jan van der Veen who helped me with GP databases and managing data. Annet Nicolai I would like to thank you for the first-class job you did making the appointments for and testing all the asthma patients for chapters 5 and 6.

Moving is always a challenge and moving halfway across the world even more so. I would also like to thank my friends, both my old friends in Australia and my new friends in the Netherlands. Firstly, my Australia friends who even though they were physically far away, were so close in my heart over the past four years. Tanya George, since we were 12 years old you have always been there for me, whether we live in the same town or halfway across the world. No matter how far away I am I know that you are always there my friend. Mandy Lishman, you were always able to read between the lines when it really mattered and kept me going through some of the rough patches. Kathryn Dixon, you have always had such incredible trust in me,
which is one of the most important things a friend can have. Alison Cavil, we are old friends who both embarked on new career adventures at the same time. Thank you for your friendship and support during mine and I wish you all the best with your exam later this year. When I look around now at all the wonderful friends we have made over the past few years, I find it hard to believe we came here knowing no-one. Laurie Stowe, I feel so lucky to have met you so quickly. You have always been there when I needed you and have supported and motivated me, thank you. Laura Sabourin, it has been great having an AIO-twin to share all the ups and downs with. Even though our research is worlds apart, you have always been there to help me whenever I needed it. Good luck with your own thesis!

Mum and Dad, even though I have been on the other side of the world for the past four and a half years, I have never felt very far away. You have shown me that when the door to one opportunity closes, another will open in its place. You have taught me to do my best and have supported me in everything I have ever done. Without your love and support I wouldn't be the person that I am today.

Christo, I guess I owe this all to you. When you told me that we were moving to the Netherlands, I never imagined that this was how it would end. You have helped me with every step of the way, from thinking through problems to proof reading each page of my thesis over and over again. We have had an incredible adventure together in Europe and it is hard to believe that it is now coming to an end. Christo, you are my fellow traveller, my best friend, my soul mate.
