Acknowledgements

It is with pleasure that I look back at the past four years in Groningen and remember the people I have met and worked with. First I would like to thank my supervisor Prof. Marius van der Put for his support from the first days of my PhD research, for his efforts to improve my writing skills, and for the invaluable discussions and ideas. With the same pleasure I thank the other supervisor Dr. Gert Vegter for his friendly encouragement and relevant suggestions. The reading committee (Prof. M. Singer, Prof. A.H.M. Levelt and Prof. C.R. Traas) has helped to put a lot of things in their own place in this thesis. I would like to express my biggest gratitude to Dr. Jaap Top who gave me a big help at the most hectic moments of writing this thesis.

It turns out that I enjoyed some scientific support from all people who have worked in the “algebraic” group of this university, including Wim Oudshoorn and my roommate Jasper Scholten. Surely, I enjoyed non-mathematical activities with these people as well. My special thanks to Gerton, Rene, Hans, Peter, Martijn, Amol, Job, Evgenii for creating lively atmosphere at the department. I also thank the members of the student volleybal club “Veracles” for the time with fun.

Finally I must mention a few people back home in Lithuania. I thank my mother and sisters for their wholehearted support and understanding (ačiū jums). I also thank Rimvydas Krasauskas and Severinas Zubė for creating me the opportunity to study in the Netherlands.
