Acknowledgments

Numerous people supported me in different ways to complete this thesis. Foremost, very special words of thanks go to my promoter Prof. Michael Biehl. I highly appreciate that he gave me the opportunity to come to Groningen to work on this interesting and challenging project. His abilities as a highly qualified teacher and supervisor have accompanied and encouraged me throughout the years. Michael was always available for discussions and advice. He provided detailed feedback and critical comments on my work and I am grateful for this careful supervision.

In the same spirit, I like to thank my second promoter Prof. Nicolai Petkov for the valuable support and guidance in pursuing research. As the head of the Intelligent Systems group, Nicolai generated a friendly working environment. Furthermore, he provided financial support for conferences and workshops which gave me the opportunity to present my work to the machine learning community.

I deeply acknowledge the collaboration with Prof. Barbara Hammer. The interactions with her extensively inspired me. I am grateful that I could benefit from her knowledge and experience. Similarly, I am thankful to the other co-authors of my publications Prof. Thomas Villmann and Dr. Frank-Michael Schleif for the fruitful cooperation. I especially want to thank Barbara and Thomas another time for my research visits in Clausthal and Leipzig.

Although we did not work on common projects, I thank Dr. Michael Wilkinson for the informal help including \LaTeX problems and other scientific issues. Lunch breaks with Michael were always interesting and I admire his profound knowledge on a wide range of topics.

I also like to thank Dr. Diane Black for her very constructive class about scientific writing. Diane was very helpful. Even after the end of the course, I always received quick response to the numerous questions I sent by E-Mail.

Special thanks goes to all my fellow Ph.D. colleagues. In first position, I have to name Aree Witoelar and Kerstin Bunte, who were kind officemates. Thanks for the good company and sharing knowledge and ideas in hours of joint time. It was a pleasure to work with you. I also really enjoyed Aree's improv comedy shows and the activities with Kerstin at the ACLO sports center. Moreover, I thank Anarta Ghosh, Georgios Ouzounis, Erik Urbach, Giuseppe Pápari, Easwar Subramanian, Florence Tushabe, Koen de Raedt, André Offringa, Ioannis Giotis, George Azzopardi, Fred Kiwanuka, Ernest Mwebaze and Ando Emerencia for the pleasant working atmosphere and the number of other activities beside scientific work. I am especially indebted to André for writing the Dutch summary of my thesis.

I appreciate the assistance of the institute staff. The secretaries Esmee Elshof, Desiree Hansen, Ineke Schelhaas and Helga Steenhuis were always supportive. Administrative issues were done efficiently by Alphons Navest, Janieta de Jong, Annette Korringa and Yvonne van der Weerd. I also like to thank Harm Paas, Jurjen Bokma and Peter Arendz for system administration.

Finally, I express my special thanks to my family for providing me with a loving home and supporting my educational career in all non-scientific ways.
