The work presented in this thesis, and other projects which could not be fitted into these pages, owe their existence to many people. As is true for all PhD students, their training, development and success is dependent on support and advice from promotores, co-workers and colleagues. During this time I have been privileged to be included in a network of scientists and friends within Groningen and Wageningen, who also opened up the world to me. I am most grateful to all these people and would like to convey my sincere appreciation. Thanks to all these people, I look forward to explore, manage and produce a scientific heritage together with co-workers and students, for future academic generations.

What is the tree without its roots? I thank Prof. dr. Oliver Kayser and Prof. dr. Wim J. Quax for welcoming me in the Department of Pharmaceutical Biology, for their invaluable guidance and for their continuing support. I am grateful to my promotores, who supported and encouraged me in my desire to try new research strategies and create international collaborations. I am confident that I am heading out well prepared for the academical battle field and thank you from the bottom of my heart.

I thank Prof. dr. Harro Bouwmeester at Wageningen University for his collaboration and guidance in the artemisinin project. You welcomed me into your laboratory early on during my PhD study, and I recurred into your laboratory so often that it felt like my second work space apart from Groningen University. While you were still appointed at Plant Research International, I shared many Friday afternoons in relaxed company with our colleagues, while getting updated on foreign specialities. I arrived confused and gradually learned how to do research and think as a researcher. I am grateful for your commitment and optimism.

During my time in Wageningen, I met many people to whom I am grateful for their friendship and scientific guidance. I would especially like to thank Carolien Ruyter-Spira, who opened her home

and let me share the family Dutch family life. I am grateful for all the discussions we had, scientific as well as life oriented. Thank you for teaching me so much about science and life. I thank Fracel Verstappen, without whose expertise in analytical biochemistry I would have fallen short. You sacrificed many off your “free” days for science, and this engagement is a memory that will continue to inspire me. I thank Jules Beekwilder for his many advices on protein isolation and enzyme kinetics and for showing me that there is a time to be relaxed in science and other times to be meticulous. I thank Fred van den Eend who taught me the secrets about fermentation, Teun van Herpen for friendly as well as scientific discussions, Ralph Litjens for teaching me molecular biology techniques, Maarten Jongsma for scientific discussions, Geert Stoopen for enzyme isolation protocols and Margriet Roelse for SDS-PAGE instructions. I thank all my other wonderful colleagues at the Plant Research International who all contributed to the seamless transitions between Groningen University and Plant Research International.

To my colleagues at Groningen University, my presence at the institute must have been ghost like. I know you sometimes wondered whether I am still with you or already had moved on to other positions. Still, every time I returned, you all welcomed me back as if I had never been gone. I thank you all for the friendly atmosphere and the mutual encouragement. I thank Gerrit Poelarends for his scientific comments and advices, Mattijs Julsing for showing me his preferred method of protein blotting and for your discussions and friendship, Remco Muntendam for interesting discourses and for sharing the hustle of co-authorship, Elena Melillo for your friendship, generosity and scientific collaboration, Rita Setroikromo for invaluable assistance, your kindness and for opening your home to me, Ronald van Merkerk for keeping the lab running, Janita Zwinderman and Yvonne Vergnes-Mettes for keeping track of me and easing the bureaucracy. I thank Carlos R. Rodrigues dos Reis, Vinod Puthan Veetil, Hans Raj, Bert Jan Baas, Anna Wasiel, Torsten Flemming, Oktavia Hendrawati, Remco Muntendam, Luis F. da

Silva Godinho, Mariette Heins, Gudrun Koch, Aart van Assen, Ilse de Haan, Mariana Wahjudi, Magda Czepnik, Pol Nadal Jimenez, Evelina Papaioannou, Muhamad Insanu and Gany Herianto for making our department such a special place. I thank my students, through whom I learned how to be a better teacher. I wish you all success and fortune in your future.

I thank the reading committee: for their revision of this manuscript.

I thank Oktavia Hendrawati and Magda Czepnik for shouldering the role as paranimfen during my defence.

I thank Prof. dr. Hiroyuki Osada at the Chemical Biology Department in RIKEN in Tokyo, for his collaboration and for lending me his post doctoral fellows and senior staff.

I thank Prof. dr. Toshiya Muranaka at the Kihara Institute for Biological Research at Yokohama City University in Yokohama, for his collaboration and for the assistance of his senior researchers and post doctoral fellows.

I thank Dr. Herman J. Woerdenbag for his Dutch translation of the English summary.

I give special thanks to the board of G al stiftelsen, who decided to support my research with a stipend. This stipend made it possible for me to visit the lab of Cold Spring Harbor in New York, USA, in order to participate in molecular biology courses. I am happy to be able to say that the gathered knowledge turned out to be crucial for my research project and that it will continue to be beneficial for years to come.

Once again, I thank all my international and local colleagues for their help which emanated in this thesis and many collaboration projects, some of which are still active.

I thank my family for their unconditional and full support.

I give a special warm thought to Khan who supported me in finalizing this thesis.

Thank you all, it has been an adventurous journey.

A handwritten signature in cursive script that reads "Anna-Margareta Rydén".
