SMALL HEAT SHOCK PROTEINS
Implications for Neurodegeneration & Longevity

Michel J. Vos

The research described in this thesis was conducted at the Department of Cell Biology, Section of Radiation & Stress Cell Biology, University Medical Center Groningen, University of Groningen, The Netherlands.

This work was supported by Innovatiegerichte Onderzoeksprogramma (IOP) Genomics Grant IGE03018.
The printing of this thesis was financially supported by:
Vereniging van Huntington, Den Haag
University of Groningen
Department of Radiation & Stress Cell Biology (University Medical Center Groningen, University of Groningen)
Groningen University Institute for Drug Exploration (GUIDE)
Biolegio, Nijmegen
Genetic Services Inc, Sudbury, USA

Table of contents

Chapter 1	Introduction ~ Structural and functional diversities between members of the human HSPB, HSPH, HSPA and DNAJ chaperone families	***page 9***
Chapter 2	A PCR amplification strategy for unrestricted generation of chimeric genes	***page 29***
Chapter 3	HSPB7 is a SC35 speckle resident small heat shock protein	***page 35***
Chapter 4	A comparative screen of the human HSPB family of molecular chaperones reveals HSPB7 as a superior suppressor of aggregation of polyglutamine containing proteins	***page 57***
Chapter 5	Longevity as evoked by different chaperone activities of small heat shock proteins	***page 79***
Chapter 6	General discussion & perspectives	***page 103***
Appendix	Nederlandse samenvatting	***page 117***
	Dankwoord	***page 121***
	Curriculum vitae	***page 125***
	Colour figures	***page 129***
