## Acknowledgements

This thesis would not have been possible without the assistance of many people who gave their support in different ways. To them I would like to convey my heartfelt gratitude and sincere appreciation. This includes not only the scientific and academic works but also colleagues and friends who have shared my experiences during the years of this work.

First of all I would like to thank to Prof. dr.Rokus de Zeeuw and also Prof.dr.Gerrit Scherphof. In 1999, you came to the Department of Pharmacy, Bandung Institute of Technology (ITB), to introduce the education and research of the University of Groningen. Prof.Scherphof, your interesting presentation at ITB about liposomes inspired me to pursue a PhD at the University of Groningen. And.....that is not just my dream, but true.

My warmest gratitude goes to Prof.dr.de Zeeuw for arranging all stuffs required for the registration process to the University of Groningen and for the scholarship application to Islamic Development Bank. In this respect, I also would like to appreciate the help of Dr.Robert Manurung (contact person in Indonesia).

I would like to express my sincere appreciation to Dr. Mohd.Ghazali (head, scholarship office, IDB) for all financial supports during the years of my study. Your prompt responses to my requests related to research fee, conferences fee and other fees have reduced my stress that always is part of doing a PhD project. Also, your many remarks to me to be on time and to keep on reminding me to comeback home after completing my study has triggered me to work hard.

It gives me great pleasure to acknowledge to the guidance, suggestions, constructive criticism, and incredible patience of my promoters and my co-supervisor: Klaas Poelstra, Dirk Meijer, and Leonie Beljaars. Klaas, your smart ideas, your bright input and your excellent English have helped me in planning the experiments, in analyzing data and in accelerating this thesis preparation. Not only in academic and in research fields I learned a lot from you, but also in your leadership and in your entrepreneurship.

Dirk and Klaas, I would like to thank you for giving me a chance to do research in your department. I have always felt welcome from the very beginning until the time I have to leave your department. Dirk, my heartfelt gratitude also is for your valuable and your wise advices, I will never forget it.

Leonie, your wide knowledge in practical things is like light in darkness. You always gave smart solutions for any practical problem I had during my research. This has made a great impression on me.

There are no words to match my gratitude to all of you for your all help during the years of my study. However just like Shakespeare I might write: above all else, you've shaped my attitude, nurturing me with discipline and light. Knowledge is the least of what you taught, yet that least at least prepared my head. Out of your heart I've learned the things I ought, underscoring words you never said.

Special thank to all people in liver fibrosis group. I am proud of being part of this team.

I will never forget the help of Betty Weert. Although you are not in this group anymore, but your excellent lessons about culturing cells in the very beginning of my works was very helpful.

Catharina, you are like a stick for a blind man. When I came in this laboratory, in the beginning I was like a blind man. I did not know anything including the playing rules in this laboratory. But you helped to avoid me from being a trouble maker. I can't imagine if you were not standing next to me. Thanks for teaching and helping me: synthesis, analysis, cells culture, antibody preparation, *in vivo* experiments, and many others. Too much help you gave me that I could not mention all. I will always remember.

Hester, at the end of my works you gave your hands to me. I do not know whether I would have been able to finalize my works without your great help. My warmest gratitude for all of this, also for nice talk with you about life. I never forget your tidy works as well. I was wondering how you manage everything so nicely.

Anne-miek, your skillfulness in animal handling and experiments have helped a lot in my research. I never forget when you had to come in the weekend to the lab to do *in vivo* experiments for me. Thanks!

Ali (without "e"), it is always nice to talk about the beauty of Indonesia with you. You know more about Indonesia than I. But, I will thank you not about this. Thanks for your important help. I have learned a lot from you especially how to culture and work with RAW cells, to do NO assays and to do ELISAs. It is a pity that I can not share my happiness at the day of my promotion with you because you are on vacation. But, I promise to welcome you in my beautiful place in Bandung.

Alie, I also would like to thank you for your help in doing part of my PCR works.

My appreciation also goes to other people in the liver fibrosis group; my colleagues and my roommates, Rick and Werner, for making the years such a great experience. Werner, thanks for your excellent lesson about PCR and also your help in doing part of my PCR works.

I want to thank the staff and people at Department of Pharmacokinetics and Drug Delivery, University of Groningen, who were indirectly involved in my PhD project.

"Ome" Jan Visser, a special warm thanks for your all services, more than just your duty. Honestly, I also would like to appreciate that you have helped me to continue my research project. I always remember your hard effort in looking for a funding for my last year of research. In this respect, I thank the management Team of the University Center for Pharmacy that provided financial support for my 4<sup>th</sup> year.

I would like to sincerely thank Hans and Robert-Jan for their constructive criticism and excellent discussion on my first paper (pharmacokinetic of IL-10).

Ingrid Molema (now at Dept.of Pathology and Laboratory Medicine/Medical Biology), I always remember your words when you gave me your excellent book "Drug Targeting". You said: "I hope you will be a good PhD student". I hope I am as good as you expected.

Gillian and Ingrid, thanks for your kind secretariat-works you did for me, for important messages you passed on to me. Also Bert, your lesson about reference manager software has helped me reducing my stress when I wrote papers. Thanks a lot!

My warmest grateful also goes to all past and present PhD students at Department of Pharmacokinetics and Drug Delivery, University of Groningen. Hafida, thanks for

sharing talk with you, and Barry, my “old” roommate for nice being together with a nice atmosphere. Willem, I never forget your kind help when I had problem with computer stuff. Rick, Werner, Annemarie, Esther, Marc and Marja, many thanks for having dinner together. Marja, thanks for your help in developing Western blotting method to detect  $\alpha$ -SMA. Although I did not use it for my last experiment, I appreciate your kind assistance. All foreigner PhD students: Jai, Asia, Kai, and Teresa, I never forget you. You are not only my colleagues, but more than that. Your friendship is unforgettable. Jai, thanks for sharing experience, thanks for nice discussions, and one thing I will always keep in mind: your valuable information about Santa Fe conference. Honestly, I would never have stayed on my feet in the USA if you hadn’t told me this. Best wishes for your research, goodluck and never give up. Asia and Teresa, thanks for getting warm dinner together. I am soory that you can’t be in Groningen during my thesis defense. I hope you will be successful in Barcelona (Teresa) and in Osaka (Asia) and have a successful career in future.

My C and O students: Jelmer, Koen and Ellen, thanks for your nice participation in part of my *in vivo* experiments.

I wish to thank the people of the GUIDE office, especially to Riekje and Maaïke for doing so many things.

My warm gratitude also to Annete Korringa for arranging administration stuff, especially for residence permit reimbursement.

I want to thank Mr.Mudzakir (consular affairs, Indonesian Embassy in Den Haag) who kindly proceeded my passport renewal.

Being a foreigner is always unpleasant if we can’t make friends. For this reason I would like to thank the people who organize “foreign guest club” and “global club”. Your excellent activities program you offered to us, made us one in diversity. Ice skating, biking, visiting historical places in Groningen, boating, or just making a short walk, or just small discussions about Dutch culture, politics and historics while enjoying a delicious “pannenkoek”. All these things brought me close to the Dutch and close to other international PhD students. I wil never forget these sweet memories.

My best friends Jola (now in Singapore), Joyce, and Daniella, thanks for being together for lunch in the restaurant of the Academie Ziekenhuis. Please keep our nice tradition, although I can’t join you anymore.

I want to thank my colleagues in Pharmacy ITB, also my best friends, who are doing a PhD study in many other countries: Diky (Japan), Shaleh (France), Doddy (France), Mbak Cici (England), Sophy (Germany), Rahmat (Germany), Uus (Australia), Elfahmi (Netherlands), and Angky (USA). Thanks for keeping in touch, for chatting, for making online conferences, and for sharing experience. I wish that you finish your research soon and comeback to ITB.

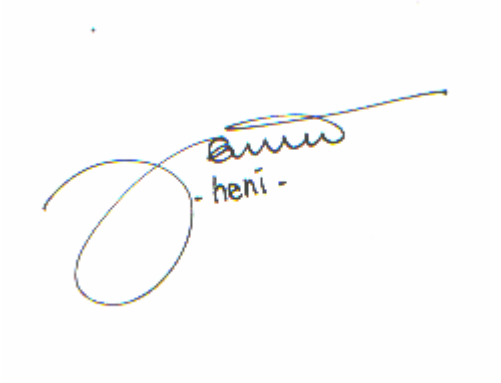

To all Indonesian PhD students in Groningen, thanks for being together, for sharing problems and experiences and thanks for your moral support. Goodluck for your research and comeback soon to Indonesia.

To all deGromiest (Indonesian moeslem society in Groningen) and PPI-G (Association of Indonesian Students in Groningen) members, thanks for our friendship, you are my second big family in Groningen. Don’t forget to comeback to Indonesia after finishing your study.

To all Indonesian people who live in Groningen, Mbak Nanie, Wak Aisyah and family, Tante Itje, Tante Smit, Bu Wilhemina and family, Pak Akhmad and family, Nur and Andre, and others, my respect to all of you. Your existence makes me feel home although I was far from my real family.

My last but not least gratitude is to my family here (Amal, my children Rayhan and Safira), family in Amsterdam and my big family in Indonesia. Thanks for your meaningful supports during the years of my study.

I realize, that not all people who importantly contributed either directly or indirectly to my study in Groningen are mentioned in this page. From the deepest of my heart, I would like to thank all of you. "Terima kasih".

*Don't ask what you can get from your country but ask what you can do.*
