 Actions

The research presented in this PhD thesis was performed in the group of Drug Design within the Groningen Research Institute of Pharmacy at the University of Groningen, The Netherlands. The research was financially supported by the European Union's Framework Programme for Research and Innovation Horizon 2020 (2014 – 2020) under the Marie Skłodowska – Curie Grant "AEGIS" (Accelerated Early staGe Drug Discovery, Agreement No. 675555).

Printing of this thesis was financially supported by the University Library and the Graduate School of Science, Faculty of Mathematics and Natural Sciences, University of Groningen, The Netherlands.

Layout: Legatron Electronic Publishing

Cover design: Atilio Reyes Romero

Cover picture: 'Piazza d'Italia' (ca. 1950 – 1951) – Oil on canvas, 40x50 cm., by Giorgio de Chirico (1888 – 1978), private collection.

Printing: Ipskamp Printing

Fragment-based Discovery Aiming at a Novel Modulation of Malate Dehydrogenase and Beyond

PhD thesis

to obtain the degree of PhD at the
 University of Groningen
 on the authority of the
 Rector Magnificus Prof. C. Wijmenga
 and in accordance with
 the decision by the College of Deans.

This thesis will be defended in public on

Monday 11 January 2021 at 9.00 hours

by

Atilio Reyes Romero

born on 29 May 1988
 in Isola della Scala, Italy

Supervisors

Prof. A.S.S. Dömling

Prof. T.A. Holak

Co-supervisor

Dr. M.R. Groves

Assessment Committee

Prof. A. Salvati

Prof. C.J. Camacho

Prof. A.M. Dolga

To my wife Maria Chiara, my most important discovery...

TABLE OF CONTENTS

Chapter 1: General Introduction and Scope of the Thesis	1
Oligomeric interfaces	3
Macrocycles	4
Covalent inhibitors	5
References	9
Chapter 2: A Fragment-Based Approach Identifies an Allosteric Pocket that impacts Malate Dehydrogenase Activity	13
Abstract	14
Introduction	15
Materials and Methods	17
<i>Recombinant protein expression and purification</i>	17
<i>NMR experiments</i>	18
<i>Microscale thermophoresis</i>	19
<i>Thermal shift assay</i>	19
<i>Crystallization, X-ray data collection and processing</i>	19
<i>Activity assay and data analysis</i>	20
<i>Enzymatic assay and kinetics experiment of 4-phenylthiazol-2-amine</i>	21
<i>Screening of 4-(3,4-difluorophenyl) thiazol-2-amine derivatives</i>	21
<i>Statistical analysis</i>	21
<i>Computational analysis</i>	22
<i>Small-angle X-ray scattering experiments</i>	22
<i>Dynamic light scattering</i>	22
<i>Enzymatic assay and kinetics experiment of 4-phenylthiazol-2-amine</i>	24
<i>Screening of 4-(3,4-difluorophenyl) thiazol-2-amine derivatives</i>	24
<i>Statistical analysis</i>	24
<i>Computational analysis</i>	25
<i>Small-angle x-ray scattering experiments</i>	25
<i>Dynamic light scattering</i>	25
Results	26
<i>Initial identification and orthogonal validation of the fragment hit</i>	26
<i>4-(3,4-difluorophenyl) thiazol-2-amine binds at the oligomeric interface</i>	26
<i>Structural rearrangements related to 4-(3,4-difluorophenyl) thiazol-2-amine binding</i>	29
<i>Sequence and interface analysis of the binding site</i>	29

6.7. 4-(3,4-difluorophenyl) thiazol-2-amine derivative screening	32
Thermal destabilization related to 4-(3,4-difluorophenyl) thiazol-2-amine derivatives	33
Validation of the allosteric nature of the pocket with 4-phenylthiazol-2-amine as a model molecule	33
Small Angle X-ray Scattering	35
Docking of 4-(3,4-difluorophenyl) thiazol-2-amine in other MDHs	37
Discussion	38
Acknowledgment	40
References	41
Supporting Information	45
Chapter 3: Benchmark of Generic Shapes for Macrocycles	59
Abstract	60
Introduction	61
Materials and methods	63
<i>Dataset</i>	63
<i>Preparation of the input structures</i>	64
<i>Software tested and parametrization</i>	64
<i>Comparison parameters</i>	66
<i>Statistical analysis</i>	69
Results	69
<i>Exhaustiveness</i>	69
<i>Accuracy</i>	69
<i>Diversity and sampling efficiency</i>	72
<i>Speed</i>	74
<i>Study cases</i>	75
<i>Intramolecular interactions</i>	80
<i>User-defined energy threshold for improved accuracy and diversity</i>	81
Discussion	82
Conclusion	87
Supporting Information	90
<i>Statistical analysis p-values</i>	90
<i>User-defined energy threshold for improved accuracy and diversity</i>	101
<i>References</i>	102

Chapter 4: Discovery of Covalent Phosphatase Inhibitors Across Six Synthetic Mass Scales	108
Abstract	109
Acknowledgement	120
References	121
Supporting Information	124
<i>Protein expression and purification</i>	124
<i>Activity assay</i>	124
<i>Mass spectrometry analysis</i>	125
<i>Covalent docking</i>	126
<i>Docking scores and binding poses to Cys121</i>	128
<i>References</i>	131
Chapter 5: Gliptin repurposing for COVID-19	134
Abstract	135
Introduction	136
Materials and Methods	138
Results and discussion	138
References	142
Supporting Information	144
<i>Virtual screening methodologies</i>	145
<i>Consensus score</i>	146
<i>Vildagliptin as study case</i>	148
<i>Comparison against the non-covalent inhibitor of PLpro of SARS-CoV</i>	150
<i>References</i>	150
Chapter 6: Summary and Future Perspectives	154
References	159
Samenvatting en Toekomstperspectieve	160

Appendix	164
Scientific contributions	165
<i>List of publications</i>	165
<i>List of posters</i>	166
<i>List of presentations</i>	167
Secondments	167
Chapter contributions	168
Acknowledgments	169
