Acknowledgements

During the four-year-and-a-bit that culminated in this thesis, I have enjoyed the crucial support and intellectual input of many people. Dear people, I cannot thank you enough but I'll give it a try anyway!

First, the people who are most vital to the thesis itself and the excellent scientific environment: Professor De Hosson, or rather Jeff, thank you for being such an inspiring and supporting promotor. Your ability to make time for all your students is extraordinary and your experience in a multitude of scientific fields is something I can only strive for – not to mention your unquestionable support of the excellent Materials Science (MK) football team. Thank you for believing in my work.

Willem-Pier, thank you for teaching me the rights and wrongs of scientific research, and for leading by example. You showed me how and where to pay attention, and you asked the questions before any of the others did. You have been there to support me with or without contract, healthy or unhealthy, and you have inspired me to consider my research as my own research.

Then I especially want to thank Diego for his personal management of my struggles, and Catalina for her inspiration as well as divine patience while we embarked on a crazy adventure. Diego, you helped me deal with complicated and confusing results in an orderly fashion. The crazy adventure has so far resulted in the development of an excellent research tool, which gave me the confidence I needed to make my research fruitful.

During my research I've had the pleasure of working in a great research environment, and I was accompanied through many loading and unloading curves. In the categories roommates, technical support, secretarial support, MK football team, lunch team, space alert team, dota team, world travelers and all-round interesting discussions I want to thank many people for a great time and innumerable contributions (in no particular order); Leo, Jintao and Linlin, Catalina, Diego $M^2$, Diego RG, Sergei, Sebastian, Eric, Paul, Willem and Mariëtte, Ismaïl, Gerrit, Vasek, Ondrej, Kalpak, Ivan, Jozef, David, Mikhail, Anatoly, Elly, Kalpak, Jiancun, Huajie, Yutao, Armin, Edwin, Koen, Michiel, Tom, Jorrit, Rik,
Frank, Rogier and all the others who’ve been part of the MK group, thank you for being great colleagues and friends.

I want to thank the people at TATA steel; Berend, Hans, Geza, Koen, you’ve been a great help to me and I’m glad I could do this research for you. It was a great benefit for me to have tangible goals, and discussions with you have always left me with new insights and the feeling that I’m working on something important. Many thanks also to the people at M2i, not only for organizing this position for me, also for helping me with my career and bringing me in contact with so many industrial partners. Great thanks also to Jeroen van Beeck, Piet Schreurs, Marc Geers and the Mechanics of Materials group of Eindhoven University of Technology for their close collaboration and open doors; I learned so many things from you.

I would like to thank the members of the reading committee, prof. Beatriz Noheda Pinagua, prof. Hans de Raedt and prof. Laurens Katgerman, for their careful reading of my thesis. Thank you to both my paranymphs, Diego and Anne, for being by my side – I need you guys.

Especially crucial for the unloading parts were my (non-colleague) friends. Pim, Siebe, Johan, Martijn, Lotte, Lisanne, Marindy, Michelle, Johanna, Jasper, Raymond, Mariska, Geeske, Kasper, Peter, Lisa, Arian, Bart, Jasper, Niels, Hjalmar, Dirk, Jet, Kasper, Eef, Gerwin, Jeroen, Peter, Ramon, Niels, Arno, thanks for the great times we had and will have!

Finally I want to thank my family – my parents Peet and Brigit who taught me to do what I like to do. I’m fairly sure I got my creativity from my mom and my proficiency with technology from my dad, and without those I would never have stood here. Imke, Tjitske and Tin, Renke, Frank and Titia, thank you for all the welcomes and hugs, for the conversations and analyses, and for letting me vent science in your general direction.

And finally finally I want to thank my girlfriend, fiancée, and life partner Anne. The last spot in the thank-you list is always saved for the most important, and to me that’s you. Thank you for supporting me through all this, for providing me a home and keeping me going. Your passionate drive, attention to detail, creativity and dedicated care have helped me immeasurably. I love you to bits.
