Acknowledgements

I started my adventure in Groningen over four years ago. I learned a lot through these years and also meet nice people with good friendships. I would like to conclude with a few words for those people who have made this work possible.

First, I would like to thank my supervisors. Joana, thank you very much for this opportunity and a lot of support throughout my PhD. You have given me the freedom to develop my ideas, safe environments allowing me to mistakes and very patient to listen to my thoughts even though many times they do not make sense. Discussing with you has been enjoyable and constructive. I am also grateful that you have encouraged me to step out of my comfort zone to communicate my research with colleagues and students. Francisco, I am fortunate to have you been my daily supervisor and co-supervisor later on when you moved to NIOO and Pennsylvania. What brings me here is your amazing work discussing how ecological processes determine ecological succession. You always give me prompt replies even though we were not in the same place most of the time. Thank you for your invaluable feedbacks on my research and for suggesting me to have enough rest after work. I am happy for you that you have established your lab and a lovely home with Maju and Luca in Pennsylvania. Dick, thank you for offering valuable suggestions on my thesis and trying many times to approve it when you had technical problems with the system.

I would also thank my collaborators. Cas, thank you for doing your master project with me and many of your ideas and contribution to the dispersal project. You have stayed at the Herdshut for over one week for the microcosm experiment alone. It was a challenge for most people. I would also like to thank you for translating the summary into Dutch. Jolanda, thanks for always being my side for the field work. All your assistance made my field and lab work went smoothly. Nelly, thank you for your help in measuring soil physicochemical characters in your lab. Xavier, thanks for accepting my samples to do analyse in your lab and for fruitful discussions with both of you and Thomas Pommier. It's been a pity the project that we have discussed was not a part of my thesis. Hope we could have more discussion in the future when all measurements are done. I would also like to thank Xing Jiajia, Adjie, Qian and Yi to let me be a part of your interesting projects, in which I learned many new things.

To the reading committee of my thesis, Thomas Curtis, Bas Teusink and Rampal Etienne, thank you for accepting the invitation to be part of the committee. Edisa and Fangyuan, thank you for agreeing to be my paranymphs.

My thank goes to all my colleagues in the microbial ecology cluster, which is a lovely academic family. I enjoyed your accompany and support. First, my thanks to the group members who used to share the same office with me. Miao, you always helpful with my naive and trivial questions when I started my PhD. All of these made my transition and adaptation in Groningen went much easier than I expected. The two succulents that you gave to me as a welcome gift on the first day I arrived are still alive. They accompany me throughout the whole PhD journey. Larisa, you are such an energetic

and joyful person. Thanks for sharing amazing things with me, inviting me to awesome parties and allowing me to witness an important time in your life, the marry party of you and Paul. Paul, of course, you are an unnamed member of our office. There are a lot of good times when we played Saboteur. Lary and Paul, thank you both for inviting and hosting me in your home in Amsterdam. Edisa and Qian, we almost started our PhD at the same time. It's great to share the same space and time during the journey of our PhD. You two are not only my office mates but also my close friends. Thank you for your help in the lab, feedbacks after my talks, and for always there with me throughout the four years. Maryam and Thijs, it's been nice to share the same office with you even though in a short time. Maryam, thank you for your technical help, especially with my questions related to Peregrine. Many thank also to the secretaries in our group, Yvonne and Chantal, thank you for your assistant on many paper works. Yvonne, the cakes and cookies you made are amazing. Thanks for sharing your recipes. Pu, thanks for your suggestions when I started the molecular experiment. Adjie, you are kind-hearted and always willing to help. Thanks for your generous encouragement. Stefanie and Pina, I am happy to be a member of the party committee with you. You have so many interesting ideas for parties and gifts. Stefanie, I really enjoy talking to you. Thank you for letting me know many interesting things about Dutch culture and language. Pina, thank you for your help in organizing workshops and courses. Teaching together with you was a very pleasant experience. Maju, thank you for showing molecular techniques in the lab in my first year. Yanfang, it's been nice also to be a neighbour with you for a while. Thanks for helping me get rid of the mice that evaded my home, which was the most helpless moment of my life in Groningen. Thank you and Panji to encourage me when I was very nervous to give a talk in BAGECO. Panji, thanks for show Yanfang and me around in Lisbon. Xuhui and Xipeng, thanks for the interesting discussions. Kiran, thanks for sharing delicious Indian food. Tianci, I'm glad we are going to work on the same project. Marjon and Sebastian, your enthusiasm for science and public communication are inspiring. Thanks to all the other current members of the group: Anna, Ana C., Cyrus, Els, Gabriella, Gert, Jan, Jaimy, Lars, Maaïke, Marrit, Misshelle, Nadja, Noor, Roos and Thomas Hackl; and who I worked with but have since moved to other endeavours: Diego, Elena, Florian, Irshad, Isabelle, Juliana, Maarten, Manoj, Melissa, Moniek, Patricia, Pieter, Renata, Sarah, Tijmen and Vanessa and all the other nice members of the group over these years: Thanks for the stimulating discussions in lab meetings, great moments in the lunch breaks and fun parties.

Next, I would like to thank those who made my life exciting outside the lab. Fangyuan, I am glad we became friends and shared many memorable moments in Groningen and different trips. Thanks for being such a fun and caring friend. Xiaoyan, thank you for inviting me to many interesting activities. I enjoyed coffee time and dinners with you, Sara and Zhengjia. Many of your critical questions made me think more about what I was thought for granted. Zhang Ting, Yujing and Yingting, thank you for visiting me in Groningen. It was great to see old friends and experience new things together abroad. Leonel and Ye Duo, you are all experienced birders. Thanks for showing me a lot of knowledge about birds. Many thank also to my neighbours from Frascati and

Upsilon. Yi and Lulu, it's been nice to live in the same unit, as well as with Antara, Shunsuke, Robin and Caro. Yi, thanks for inviting me to hot pot parties in your home and other interesting activities, like skiing with you, Tingting, Heng Yang and Yingying. Lulu and Feifei, thank you for inviting me to your sweet home and letting me witness the important life moment of Chengcheng. My thanks also to other Chinese neighbours: Beibei, Chongnan, Jia Jijia, Fang Shun, Feng Shuai, Gao Jian, Liu Jianjun, Mengfan, Shaoyu, Wang Qian, Weiteng, Yafeng, Yukun, Yuhan and Zhang Rongjing. There were a lot of good times to be a neighbour with you, such as sharing delicious Chinese food, celebrating New Year, making dumplings, listening to the live violin performance by Weiteng, BBQ near the Lake and playing games until early morning.

This is a very challenging year for most people due to COVID-19 pandemic. It was hard to meet people physically, but I still could feel the warmth from people. Pang Shuang, Wang Jing, Zhou Meng and Yao Bei, it was great to still be a group studying together and teasing each other though we are living in different places. Yanmei, Mingling, Qiu Ying, and Yingting, thanks for asking whether I need any help during the first lockdown in the Netherlands.

I became a real nomad when left my hometown for my study over 12 years ago. I have lived in a few places since then. No matter where I stayed, how far it was from home, I always feel the strong support from my original point. Thank you, mom and dad, for your always love, support and understanding. You have been the first mentors in my life. From you, I learned to be curious about things, kind to people and strong for difficulties. Jia Jing, you are such a sweet, clever and independent girl. I am lucky enough to have you as a sister. My thanks also to my aunts, uncles, cousins, nephews and nieces, especially Jia Ruifang and Ping Jingxia. You let me feel the love and supports from the big family.

Last but not least, I would also thank the nice people that I met previously in my life in different places. Thank all of you for bringing fun time, inspiring moments, and all the good memories. Without you, I cannot be the person I am today.

Xiu Jia

Groningen, December 2020
