Acknowledgement

During this enjoyable journey of PhD research project I have had the privilege of being supported by many people. Words cannot fully describe my appreciation to all people that help me to complete this thesis. I am very grateful to all of them.

My deepest thanks go to my promotor and copromotores: Prof J.M.M. Hooymans, Prof. XR. Li, Dr. L.I. Los and Dr. R. Kuijer. During the past 5 years, your scientific curiosity, open-mindedness, rational thinking and intellectual honesty have deeply influenced me.

Prof. Hooymans, my sincere gratitude for your continuous support of my PhD project. Your patience, motivation, enthusiasm, and immense knowledge have been the greatest help throughout my entire study.

Dr. Los, my appreciation for your patient guidance is beyond words. Besides the scheduled appointments every month, you are always available to discuss my research questions and ideas. I like to send my writings to you not only because that I can share the joy of nice results but also because that they always come back with a touch of rational and logical thinking of yours within one or two days. Thank you for providing me the opportunity to work on my own research ideas. Some of them are in this thesis, while some of them remain to be hypothesis in the log book. Thank you for allowing me to try, it helped me to be resilient.

Dr. Kuijer, your profound knowledge and critical thinking in experimental planning and data interpretation have been a great influence during these years. The questions you raised during our monthly meeting were always enjoyable to listen but very difficult to answer. And the knowledge and logic behind your comments and suggestions have been a great contribution to this thesis.

Prof. Li, I am very grateful for your constant support and gentle guidance. I appreciate the fact that even with full agenda, you always find time to meet and discuss my research progress with me.

Corien, thank you for guiding me through the experimental techniques, you magically turn the precise experimental procedures into fun and joy. Thank you for the countless beautiful images and bands you crafted with electron microscope and western blot. Your presence always makes the lab a pleasant place to be.

Bart, you have been a good friend since I started in Groningen. Sharing experiences about both our PhD projects and “other more important matters” made the days with “pain and failure” tolerable.

Prof. Busscher and Prof. van der Mei, thank you for having me to work in the laboratory of biomedical engineering department. The state of art facilities, the dynamic and innovative research environment, the scientific programs greatly inspired me to explore the unknown.

Prof. Jansonius, you always find time for me to help me with my data analysis. I am very grateful for your enthusiastic discussions and suggestions.

Dr. Huiskamp, Dr. Renardel de Lavalette, and Dr. Postma, thank you for supporting me and providing the experimental materials despite your busy clinical practice.

Dr. van Kooten, I am very grateful for the insightful comments and suggestions on the subject of myofibroblasts.

Fenna, Ella, Joke, Wim, Wya, Ina and Willy, thank you for all the time you spend with the paper work and administrative support and for always finding a way to help me.

Ed, Hans, Joop, Willem, Willy, thank you for all your kind advice and technical supports during my PhD. Thank you for always being present and ready to help me.

My dear colleagues of LEO, Wietse, Christiaan, Esther, Francisco, Tim, Nancy, Lisanne, Lisette, thank you for sharing your experience, helping me when I need advice, and all the conversations we have over many different occasions (mostly surrounded by some food).

My fellow researchers in BME, especially Arina, Anna, Jesse, Joana, Helen, Song Lei, Zhao Bing Ran, your company and friendship have always been delightful.

Lastly, I would like to extend my deepest gratitude to my family. For my parents who raise me up and support me in all my pursuits. For my adorable and intelligent wife who is delightful and encouraging especially in the rainy days. Thank you.
