# Acknowledgments

This book is the final result of a long path, consisting of good and also difficult moments, which definitely enriched me from both a scientific and a human point of view.

During this period I have never been alone; many people supported me in many ways, sometimes only with their presence. I wish I could thank everyone, but I'm afraid that this task is impossible to be achieved in few pages. I hope you will forgive me if I have forgotten someone.

I would like to start by thanking Prof. Maria Antonietta Loi, my supervisor. Maria, in these last years you have been a constant guidance for my research, showing me what it means being a scientist. Thanks to you I had the possibility to enjoy the experimental life in the lab and the possibility to collaborate with many valuable people.

During the last year I was facing a difficult time, since I had to finish my thesis while I was already working in Eindhoven. It was a period in which this new life setting could easily distract me from completing my thesis project in a reasonable time. But you Maria helped me to finalize my work, constantly pushing me and letting me feel the importance to complete this path. Thank you!

A sincere acknowledgement goes to Prof. Petra Rudolf, Prof. Giovanni Bongiovanni and Prof. Anne-Sophie Dewus, for accepting to be part of my thesis reading committee and for giving me valuable input to improve the manuscript.

Petra, thank you for welcoming me in Groningen. I still remember the first time we met, it was in Sardinia. The chats with you inspired me a lot and it is also thanks to you that I decided to start my PhD in Groningen.

Katja, we shared together a lot of my research. It was a pleasure to discuss the topics of our FOM project with you, because of your incredible knowledge and your kindness. Thanks a lot for encouraging and supporting me.

Dear Albert, I think I do not exaggerate if I say that a big part of this thesis is the product of long hours in front of the microscope with you, debating the results with such a young enthusiasm. Thank you from the bottom of my heart for being so precious for my research. I definitely could not achieve these nice results without you.

Andrea, together we implemented the microscope setup and we worked on several experiments. You taught me about the correct attitude inside a lab. It was a pleasure to have you in the group during your scientific missions. I will always be
