Prof. dr. R.P. Coppes

Contents

Chapter 1.	General introduction	7
Chapter 2.	Delineation guidelines for organs at risk involved in radiation-induced salivary dysfunction and xerostomia	27
Chapter 3.	The potential benefit of radiotherapy with protons in head and neck cancer with respect to normal tissue sparing: a systematic review of literature	49
Chapter 4.	Potential benefits of scanned intensity-modulated proton therapy versus advanced photon therapy with regard to sparing of the salivary glands in oropharyngeal cancer	75
Chapter 5.	Using a reduced spot size for intensity-modulated proton therapy potentially improves salivary gland sparing in oropharyngeal cancer	95
Chapter 6.	Sparing the salivary glands with protons in oropharyngeal cancer: benefits of 6-beam split-field intensity-modulated proton therapy (IMPT) versus 3-beam IMPT	115
Chapter 7.	The potential of intensity-modulated proton radiotherapy to reduce swallowing dysfunction in the treatment of head and neck cancer: a planning comparative study	135
Chapter 8.	General discussion and conclusions	153
	Summary	191
	Samenvatting	197
	References	205
	Acknowledgement/Dankwoord	223
