Dynamic clustering

Classifying people through ecological momentary assessment

PhD thesis

to obtain the degree of PhD at the
 University of Groningen
 on the authority of the
 Rector Magnificus Prof. C. Wijmenga
 and in accordance with
 the decision by the College of Deans.

This thesis will be defended in public on

Monday 7 February 2022 at 16.15 hours

by

Anja Franziska Ernst

born on 28 March 1992
 in Baden-Baden, Germany

Supervisors

Prof. C.J. Albers

Prof. M.E. Timmerman

Assessment Committee

Prof. E. Ceulemans

Prof. E.L. Hamaker

Prof. P. de Jonge

**Dynamic clustering: Classifying people
through ecological momentary assessment**

Contents

1	Introduction	1
1.1	Dynamic clustering	2
1.2	Overview	3
2	Insight into individual differences in emotion dynamics with clustering	7
2.0.1	Clustering methods for time series designs	9
2.0.2	Proposing a probabilistic clustering procedure using finite mixture models	11
	Summarize individual time series	11
	Probabilistic clustering	11
2.0.3	Autoregressive representation of time series as filter	12
2.1	Simulation 1: Equal intercepts between clusters	14
2.1.1	Design and procedure	14
2.2	Simulation 2: Unequal intercepts between clusters	16
2.3	Results simulation 1	18
2.3.1	Recovery performance	18
2.4	Results simulation 2	23
2.4.1	Discussion of results	25
2.5	An empirical example	25
2.5.1	Data and modelling procedure	25
2.5.2	Empirical results	26
2.6	Conclusion	31
2.A	Appendix	31
3	Latent class vector-autoregressive modelling	37
3.0.1	Time-series models for discrete unobserved heterogeneity	38
	Time-series clustering	38
3.0.2	Model specification	39
3.0.3	Estimation	40
3.0.4	Simulation	41
3.1	Empirical Example	41
3.1.1	Methods	41
3.1.2	Results	42
3.2	Discussion	44
3.A	Appendix: EM algorithm	47
3.A.1	Initialisations for the EM algorithm	48
3.A.2	Model selection	48
3.A.3	Estimation of the model	49
3.B	Appendix: Assessments during the EM algorithm	52
3.C	Appendix: Simulation	52
3.C.1	Design and procedure	52
3.C.2	Simulation results	54

4	Mixture multilevel vector-autoregressive modelling	57
4.0.1	Multilevel VAR — accounting for continuous inter-individual differences	57
4.0.2	Latent class VAR — accounting for discrete inter-individual differences	58
4.0.3	Mixture multilevel VAR — accounting for continuous and discrete inter-individual differences	58
4.1	Model specification	59
4.2	MMVAR model specification and estimation considerations	60
4.2.1	(a) Constraints can aid estimation	60
4.2.2	(b) Equality constraints can aid interpretation	61
	Using equality constraints to create a fully crossed grouping of trait scores and dynamics	61
4.2.3	(c) Model specification influences interpretation	62
	Accounting for inter-individual differences in within-person means .	62
	Standardisation in a multilevel model	64
4.3	Simulations	64
4.3.1	Simulation 1: The potential downward bias of auto-and cross-regressive slopes	65
	Design and procedure	65
	Results	66
4.3.2	Simulation 2: Performance of MMVAR model estimation	66
	Design and procedure	67
	Outcome measures	68
	Results	68
4.4	Application: COGITO study	71
4.4.1	Methods: The model to be estimated	71
4.4.2	Results	72
4.4.3	The 3 component solution	73
4.4.4	Conclusions	74
4.5	Discussion	77
4.5.1	Data requirements	77
4.5.2	Model evaluation	78
4.A	Appendix for Simulation 2: Performance of MMVAR model estimation . . .	80
4.B	Appendix for Application: COGITO study	82
4.B.1	Results: The 2×2 component solution	82
5	A comprehensive model framework	87
5.0.1	Separating cross-sectional and longitudinal effects	87
5.1	Accounting for between-individual differences	88
5.1.1	Latent categorisations	89
5.1.2	Random coefficients	89
5.2	Model framework	90
5.2.1	Assumptions	92
5.2.2	Elements of our model framework	93
5.3	Review of models	95
5.3.1	Cross-sectional and random coefficient models	95
5.3.2	Trajectory models	96
5.3.3	Models that account for autoregressive dependence	97
5.3.4	Models with random autoregressive coefficients	98
5.3.5	Models that capture between-individual differences in autoregressive dependence through latent categorisations	100

5.3.6	Summary of the review	105
5.4	Extensions to the model framework	105
5.5	Discussion	106
5.5.1	Concluding remarks on model specification	106
5.5.2	Concluding remarks for empirical researchers	107
6	Conclusion and discussion	109
6.1	Model specification and estimation	109
6.1.1	Implications of centering	110
6.2	Empirical applicability	111
6.3	Avenues for future research	111
6.3.1	Extensions to complex data structures	111
6.3.2	Robustness of the dynamic clustering procedures	112
	Samenvatting	113
	References	117
	Acknowledgements	129
	About the author	131
