Acknowledgments

I would like to thank **Prof. Siewert J. Marrink** for introducing me to the fascinating world of computer simulations so many years ago in a masterclass when I first came to Groningen. Also, thanks for agreeing to work with me on this PhD journey and encouraging independence. I would also like to thank **Prof. Dick B. Janssen** for having me in your group all those years, encouraging scientific thinking, and working with me in the writing of manuscripts. I am a better writer because of you. Thanks to both for working so well together.

To **Helgi**, whose energy and shine when talking about computer simulations inspired me to follow this career path. for inspiring me to follow this career path. To **Eduardo** for helping me navigate through technical details, being a referent of a molecular modelling scientist, and in general for the stimulating scientific discussions. To **Hein** for the scientific discussions during the master, the good questions asked during group meetings, and for being such a thorough reviewer of manuscripts. To **Elvira** for being an excellent listener in scientific discussions and offering prudent advice.

I would also like to thank my collaborators, mainly experimentalists, without whom many of the presented projects would not have had the reach they had. To **Qinglong** for managing to pull off the lab experiments, pushing forward the projects, and for the hallway conversations. I liked working with you. To **Sebastian** for offering prudent advice on the Martini modelling, reviewing manuscripts, and the positive attitude when discussing projects. To **Paulo** and **Riccardo** for the Martini modelling project. To the crystallography team (**Nikolas**, **Henriëte**, and **Andy-Mark**) for your contributions in the transaminases project. To **Liubov** and **Prof. Marthe Walvoort** for inviting me to the *N*-glycosyltransferases project, and providing the expertise on that subject. It is impressive how much you could elucidate by experimental techniques. To **Antonija** for carrying out the experimental part of the decarboxylases project and for putting together a manuscript. To **Dong** for carrying out the experiments of the *PjTA* project. I wish you the best on your master.

To **Prof. Marco Fraaije** for having me in your group discussions, taking us to see dinosaurs, and for agreeing to being part of the assessment committee. To **Prof. P.G. Bolhuis** and **Prof. A.J. Mulholland** for agreeing to be part of the assessment committee of this thesis.

Cheers to my former office mates **Minmin**, **Simone**, **Uriel**, **JJ**, and **Liu Yang** (also **Elvira**, **Eduardo**, and **Hein**). **Alejandro**, **Estela**, and **Ignacio**, thanks for the entertaining hallway conversations. And **Estela** also for helping me sort through

paperwork. Cheers to **Max, Yiming, Mohamed, Milos, Hugo, Mattijs, Nikola, Sun, Caterina, Andrea, Rouel, Laura, Maria, Masha, Carsten, and Haleh**. Thanks to **Bea, Anmara, Jannet, and Sandra** for the administrative work. Thanks to docents **Joke** and **Fros** for teaching me Dutch, you are the best language teachers I have ever had. To **Alex** for the support during the master.

Special thanks to **Francesco** for being such a good friend and a good listener. I am sure you will help a lot of students in your path as a teacher, and will find what you're looking for in life. **Pamela**, thanks for the excellent advice and conversations we've had all these years. I am sure your people's skills will take you far in life. Open a YouTube channel already!

I would like to thank the open-source community for developing and maintaining amazing software. For example, to **Tuan Lee**, who I have never met but shared his code in GitHub. Lee's code was used to train a neural network to generate abstract random art, which was used in the cover of the printed version of this thesis. The open-source community makes walking the same path easier for everyone else that follows. Thanks to the CIT from the University of Groningen for providing access to the Peregrine HPC cluster. Finally, I would like to thank the CONACYT for providing the 4-year PhD grant needed to complete this degree.
