Acknowledgments

It's so hard to say goodbye, but the PhD life in Groningen will be gone soon.

First of all, I would like to express my gratitude to the EU-Asia mobility project launched by the European Union, for its supporting me a first touch on the Europe world in 2011. The fresh 10-month life in the Netherlands triggered my curiousness and interest in this beautiful country. I am deeply thankful for the Bernoulli scholarship which supports me with this PhD study in Groningen. The fruitful life in Groningen and the Netherlands adds a special color (or rather, orange) in my life, which will not fade easily. More importantly, thank these scholarships for leading me to meet with two important persons in my life, Prof. Ming Cao and Prof. Franjo Weissing.

My deepest gratitude goes first and foremost to my promoters, Prof. Ming Cao and Prof. Franjo Weissing. I have learned a lot from the 'combination' of these two outstanding scientists specifying in engineering and theoretical biology respectively.

I gratefully acknowledge all the help of Prof. Ming Cao for his guidance throughout the process that resulted in this thesis. His precious kindness cannot be returned by my one word of 'Thanks'. We get along splendidly and breezily, and the life of working with him is full of unforgettable memories. I greatly appreciate his supporting me to apply the scholarship and carry out this PhD study here. Without his great help, my life in these almost three years and even the future would be rewritten, which might be totally different with the present life. He has walked me through all the stages of the PhD study in Groningen and even the writing of

this thesis. Without his insightful criticism, consistent and illuminating instructions, I could not do my PhD study smoothly and this thesis could not have reached its present form. By learning from him who has extremely outstanding education background and talent, I am especially enriched in the professional knowledge, academic thought, and creativeness, which remain of great value in my career development. Deeply thanks for the freedom he gave me to develop my ideas beyond the domain of engineering, and his valuable support from all aspects in my academic studies. His hard working and talent, positive attitude towards life, strict and careful science attitude help me to learn a lot beyond the research.

I am deeply impressed by his kind smile, which is similar like the pleasing sunshine in Groningen and encourages me to freely communicate with him about topics in all aspects of life. I am really grateful for his providing me with such a delightful supervising 'mode', which greatly benefits my PhD study. I also appreciate all the great help and kindness he gave me, from Groningen to China. His kindness helped me to stagger out those tough times, and his help was crucially important to my life. Thanks for meeting him in my life.

I would like to express my heartfelt gratitude to Prof. Franjo Weissing. The life from 2011.05 until now has enough to make him play an important role in my life. The deep and complicated feelings cannot be summarized by one sentence. I greatly appreciate his inviting me and Chunyan, thus leading us to meet him and own the European experiences here and embarking on a new chapter in my and our life. The wonderful life to work with him makes us believe that we will never meet next 'Franjo' in our life, who is so perfectly fit with our life. Deeply thanks for his offering this perfect opportunity to me and supervising my PhD study in our theoretical group, which is famous for its critical standards in Europe. Deeply thanks for his really well-intentioned training me to be a good researcher in his 'Germanic' and really serious way, and also those precious encouragements from him. I also deeply keep it in mind that he took extensive amounts of time to comment on my works and numerous aspects of scientific practice, which was notably verified by those emails in midnights. I am also grateful for his sharing me of the life experiences to cure me of my grief. The wholehearted communication helped me to get out of my sorrowful life, and let me know that the precious human emotions are the same, irrespective of nationalities, races...I am also proud to be his first Chinese student.

Tough goodbye... Thanks for this destiny that ties us together. I deeply thank our group leader Prof. Jacquelin Scherpen for accepting me to join in our group and providing a pleasant and inspirational working environment for our group.

I would like to express my gratitude to the members of the reading committee, who took the time to read critically through my thesis and provided valuable comments.

At such a moment my heart is also full of deep miss for my life in Peking University and my previous supervisor Prof. Chu there. Deeply thanks for Peking's providing me with the first opportunity to do visiting study in the Netherlands, and great thanks to my supervisor Prof. Chu for his thoughtful and thorough guidance, great help and attention in my Peking life gone by.

Deeply thanks my colleges in the Discrete Technology and Production Automation (DTPA) research group. Many thanks go to my former and present colleagues during my PhD study. Thank Hector Garcia de Marina Peinado for his help with experiments with E-pucks. I also cherish the memory with our group members: Shuai Feng, Xiaodong Cheng, Jie Huang, Yiwen Qi, Sina, Quan Xu, Weiguo Xia, Shuo Zhang, Fan Zhang, Tao Liu, Qingkai Yang, Ruiyue Ouyang, Hui Liu, Chen Wang, James Riehl, Hadi, Anton, Yuri, Desti Alkano, Prof. Bayu Jayawardhana, Mauricio, Prof. Claudio de Persis, Daniel Alonzo Dirksz, Gunn Larsen, Sebastian, Ewoud Vos, Matin Jafarian, Martin Stokroos, Shodhan Rao, Robert Huisman, Pim van den Dool, Sietse Achterop, Martijn, Herman Kuis, Marko Seslija, Xiaofeng Liu, Jieqiang Wei, Pouria Ramazi, Manuel Mazo, Nima, Tjardo Scholten, Jasper Boomer, Martin Stokroos, Romdlony, and Bao Nguyen for their friendship. I also deeply appreciate the kind work and great help from our secretary Frederika in my work and life.

I also owe my sincere gratitude to my fellows in the Theoretical Biology group who gave me their help and time in listening to me and helping me work out my problems during the difficult course of the thesis. They are: Piet van den Berg, Andres Quinones, Prof. Sander van Doorn, Jordi, Lucas, Alex, Ana, Aniek, Ruth, Joke, Kuke, Stefany, Ingeborg, David, Alberto, Leonardo, Prof. Ido Pen, Stefany, Albertas, Irma, Sjouke, Margarete, Verena, Martin, Freek, Jennah, Tsukushi, Linh-Phuong and Rik Veldhuis. Thank Piet and Andres, who always kindly invited me to participate in sports, e.g. football and table tennis, which enriched my (a little bit dull) life here. Thank my office mate Jordi, his hard work is a constant inspiration to me,

and his kindness and our talk helped me to gain a deep understanding about the Netherlands and the people here. Thank Jordi for translating the summary of this thesis into Dutch. Thank 'Network theory' for connecting me and Alex, and the talk with him helped me to gain much understanding about the world. Thank Ana (and Franjo) for leading me to get first touch about the field of 'division of labor'. Thank Aniek for giving me the Dutch-Chinese dictionary to help me know the The Netherlands on the first day when I first time came here in 2011. Thanks Lucas for the warmful words (i.e. you can ask me for any help if you have any difficulty in our group) and his help in the following years. Thank Ingeborg for her enthusiasm and great help in my work and life. Thank Joke for providing me with the chance of being a teaching assistant in the course of C++, and all the great help from her.

Special gratitude to my Chinese friends here: Weiguo Xia, Shuo Zhang, FanZhan, Tao Liu, Haili Liang, Chen Wang, Hui Liu, Ruiyue Ouyang, WenwenDiao, Xiaoguang Du, Ranran Li, Dongdong Mu, Wenjuan Ma, XiangfengMeng, Jieqiang Wei, Naishi Li, Najun Jiang, Xiaodong Cheng, Jie Huang, Yiwon Qi, Quan Xu, Qingkai Yang, Yuehu Wang, and Shuai Feng. Time marches on, and it is difficult to see all of them in Groningen since some of them have already left the Netherlands. Their help and friendship make me feel so close to our motherland China, though almost 8000 kilometers from here. Best wishes for their future!

I also owe a special debt of gratitude to my good friends Wu Bin in Germany, Jiang Lijun in China, thanks for their always kind help in my life.

Last my thanks would go to my beloved family. Thank them for their loving considerations in me all through these years. It's all because of you I am not alone.
