## CONTENTS

Chapter 1	General introduction	6
Chapter 2	Development of a test battery to enhance safe return to sports after anterior cruciate ligament reconstruction	16
Chapter 3	Low rates of patients meeting return to sport criteria 9 months after anterior cruciate ligament reconstruction: a prospective longitudinal study	34
Chapter 4	A critical analysis of limb symmetry indices of hop tests in athletes after anterior cruciate ligament reconstruction: a case control study	52
Chapter 5	Altered movement during single leg hop test after ACL reconstruction: implications to incorporate 2-D video movement analysis for hop tests	66
Chapter 6	Progressive strength training restores quadriceps and hamstring muscle strength within 7 months after ACL reconstruction in amateur male soccer players	84
Chapter 7	Have we forgotten our patient? An exploration of patient experiences after ACL reconstruction	106
Chapter 8	Passing return to sports tests after ACL reconstruction is associated with greater likelihood for return to sport but fail to identify second injury risk	122
Chapter 9	General discussion	144
Chapter 10	Appendices	164
