Prins, G. H. (2022). *Metabolic-associated fatty liver disease: a major problem miniaturised*. [Thesis fully internal (DIV), University of Groningen]. University of Groningen. <https://doi.org/10.33612/diss.204505585>

Copyright

Other than for strictly personal use, it is not permitted to download or to forward/distribute the text or part of it without the consent of the author(s) and/or copyright holder(s), unless the work is under an open content license (like Creative Commons).

The publication may also be distributed here under the terms of Article 25fa of the Dutch Copyright Act, indicated by the "Taverne" license. More information can be found on the University of Groningen website: <https://www.rug.nl/library/open-access/self-archiving-pure/taverne-amendment>.

Take-down policy

If you believe that this document breaches copyright please contact us providing details, and we will remove access to the work immediately and investigate your claim.

Downloaded from the University of Groningen/UMCG research database (Pure): <http://www.rug.nl/research/portal>. For technical reasons the number of authors shown on this cover page is limited to 10 maximum.

Stellingen

1. Hepatic steatosis should not be considered benign but instead a liver injury. *(This thesis)*
2. It is easier to accumulate fat than to lose it. *(This thesis & personal experience)*
3. Transcription factor ligands aid the reduction of hepatic steatosis in human liver tissue *ex vivo*. *(This thesis)*
4. Animal testing should no longer be a go-to method, and precision-cut liver slices are a good alternative. *(This thesis)*
5. Advances in food science, more so than advances in pharmaceutical science, may reduce metabolic-associated fatty liver disease.
6. Wrong does not cease to be wrong because the majority share in it. *–Leo Tolstoy*
7. We can evade reality, but we cannot evade the consequences of evading reality. *–Ayn Rand*
8. Whether life is worth living depends on the liver. *~William James*
9. The best PhD candidates have four core qualities: creativity, motivation and imagination.
10. Goed onderzoek is nooit
