ACKNOWLEDGEMENTS

To everyone that encouraged me or gave me their support during my PhD journey and to finalize this work: Thank you! Dank u wel! Dankeeschön! ¡Gracias!

I am so grateful to so many people, those who are close by and far away.

First of all, I would like to thank my supervisor Kathrin Thedieck for letting me join her research group in my first year of my master studies. Also, for her support to continue with my doctoral studies at the University of Groningen and Innsbruck. Not only did I learn so many scientific skills from you, but also I learned how to deal with science—a whimsical and sometimes difficult area to understand. Thanks for your patience and to motivate me to do my best.

I also would like to thank my co-supervisor Elizabeth Veal for her help and guidance while doing my research with such an interesting worm, and my co-supervisor in Groningen, Liesbeth Veenhoff, for her advice and support, especially at the beginning of my PhD when I was a bit lost.

I want to thank to all the members of the Metabolic Signaling Lab for making all these years of PhD a wonderful experience. First, a big thanks to my very first supervisor Alex, who showed me all the tips and tricks of the lab. Alex, thank you also for all the great moments outside the lab with and without a beer. Thanks to Ulrike for helping me when I had to deal with science, food, housing, you always saved me. To my southern girls Patricia, Maria and Ceci: thank you for your warm and joyful words all the time. Gracias, Jose, not only for teaching me some cool techniques but also for expanding my musical knowledge. My deepest gratitude to all the wonderful technicians Lea, Miriam, Ineke, Madlen, Kane and Anja, you always gave me a hand in the lab or outside the lab. And I cannot put in words all the amazing time I spent with all the other members of the lab: Lucas, Alienke, Anna, Yang, Tobi, Marcel, Martina, Petra, Paul.

Special thanks to all my students who supported me during the development of my research: Luca, Kenneth, Malou and Michelle. I hope you enjoyed your time in the lab as much as I enjoyed doing science with you.

The department of pediatrics at the UMCG was a great place to enjoy science and have fun. I met so many awesome people who also offered me help, in addition to great scientific and non-scientific discussions.
A big thank to all my colleagues at the Institute of Biochemistry from the University of Innsbruck for their kind welcome, for their help during my PhD and for all the fruitful scientific discussions.

Next, my big gratitude to all my scientific collaborators for their advice, discussions and sharing scientific knowledge. In particular, I thank the group of Christiane Opitz and Elizabeth Veal.

Special thanks to my international MPDI friends, with whom I shared so many moments at the library or at Peperstraat or travelling.

Being so far from home was not easy, but I was lucky to find so many great friends from so many different countries. Thanks to all my friends at the UMCG and at my international student houses. In particular, I want to thank my lovely roommates Ailine, Lili, Gabi and Alfredo. Our time in the kitchen, sharing food, going out to dance, watching movies or doing nothing made me feel part of a beautiful Colombian family.

Gracias infinitas a todas, todos y todes mis amigos latinoamericanos en Groningen que me arroparon y me hicieron pasar tantos momentos divertidos, y porque me hacían olvidar el frío con su cariño. A mi banda mexa por sus apapachos. Todes tienen su casa donde quiera que yo vaya.

Aunque estuviera lejos, el apoyo y cariño de mis amigas y amigos en México nunca lo dejé de sentir. Mil gracias a Judith y a mi primo Javi por escucharme y alentarme en momentos difíciles. A mis biomédicos Karensita y Rodri por esas videollamadas de chisme científico y no científico.

Como buen mexicano, afortunadamente, siempre he sido alentado y motivado por toda mi enorme familia. Abuelos, tíos y tías, primos y primas. Así que a todos ellos les doy las gracias y espero con ansias celebrar este logro a su lado.

Y finalmente doy gracias a mis pilares durante toda mi vida, pero en especial durante mi doctorado ya que no me dejaron rendirme: mi manita, Ely, y mis padres, Eduardo y Rome. Gracias por amarme como soy. Gracias por apoyarme, empujarme y regañarme. Gracias por enseñarme a crecer y levantarme cuando la vida te tira. Su ejemplo de vida, esfuerzo y cariño los llevo siempre y a todas horas. Manita, gracias por ser mi mejor amiga y consejera. Padre, eres mi más grande ejemplo y mi admiración hacia ti nunca deja de crecer. Me has enseñado tanto de lo que se gana al trabajar en equipo y a seguir adelante en las buenas y en las malas. Rome, eres la más preocupona y cuidadora, es impresionante como la
distancia no te detuvo. Tu amor y rigor me han hecho alcanzar cada objetivo que me he propuesto. Sin tu apoyo y palabras de aliento no hubiera podido finalizar este camino científico. Los amo.

If I am missing someone that ever asked me about my PhD or gave me a piece of advice and time, I am sorry and thank you for your support!

Bye bye #PhDlife
CURRICULUM VITAE

Marti Cadena Sandoval was born on July 11, 1991 in Mexico City, Mexico. After his graduation from high school, in 2009, he studied Basic Biomedical Research at the National Autonomous University of Mexico (UNAM). His studies were focused on Microbiology, Genetics and Biotechnology. He developed his bachelor thesis in the research group of Luis Servin Gonzalez characterizing the methylation system of the bacteria Streptomyces coelicolor and his biotechnological application.

In 2014, Marti Cadena Sandoval started a two-year Master in Medical and Pharmaceutical Drug Innovation at the University of Groningen (The Netherlands). During the first year of this master, he worked in the research group of Prof. Kathrin Thedieck at the University Medical Center in Groningen (UMCG), investigating mTOR signaling under stress in breast cancer cells. Afterwards, he got the opportunity to gain experience in another country. He went for his second year of the master to the lab of Dr. Elizabeth Veal at Newcastle University (United Kingdom), where he studied the stress response in nematodes. After obtaining his master degree in 2016, he re-joined the research group of Prof. Kathrin Thedieck as a PhD candidate in Metabolic Signaling. In July 2019, Marti joined Prof. Thedieck’s group at the University of Innsbruck (Austria).
