The intestinal short chain fatty acid production: its complexity and metabolic consequences

Melany Rios Morales

Part I of this thesis (Chapters 2, 3 and 4) was performed in the public-private partnership 'CarboKinetics' coordinated by the Carbohydrate Competence Center (CCC, www.cccresearch.nl). CarboKinetics is financed by participating industrial partners Agrifirm Innovation Center B.V., Cooperatie AVEBE U.A., DSM Food Specialties B.V., FrieslandCampina Nederland B.V., Nutrition Sciences N.V., VanDrie Holding N.V. and Sensus B.V., and allowances of The Netherlands Organisation for Scientific Research (NWO).

Part II of this thesis (chapters 5 and 6) was funded by the UMCG Hereditary Metabolic Diseases Fund and by Stichting De Cock-Hadders. Neither the CCC nor any of the companies participating in the CCC were involved in Part II of the thesis.

The work presented in this thesis was performed in the department of Pediatrics, Center for Liver and Metabolic Diseases, University of Groningen, University Medical Center Groningen. The printing of this thesis was financially supported by University of Groningen and the Graduate School of Medical Science of the University Medical Center Groningen.

university of
 groningen

The intestinal short chain fatty acid production: its complexity and metabolic consequences

PhD thesis

to obtain the degree of PhD at the
 University of Groningen
 on the authority of the
 Rector Magnificus Prof. C. Wijmenga
 and in accordance with
 the decision by the College of Deans.

This thesis will be defended in public on

Monday 11 April 2022 at 12.45 hours

by

Melany Yanina Rios Morales

born on 14 September 1990
 in Curacaví, Chile

Supervisors

Prof. B.M. Bakker

Prof. D.J. Reijngoud

Assessment Committee

Prof. F. Kuipers

Prof. R.J.A. Wanders

Prof. M. Nieuwdorp

TABLE OF CONTENTS

Chapter 1: General introduction and outline of the thesis	7
 <i>Part I. Fermentation of non-digestible carbohydrates and production of short-chain fatty acids in the gut and the systemic metabolic fate of SCEFA</i>	
Chapter 2: Intra-intestinal degradation kinetics of non-digestible carbohydrates and the fate of short-chain fatty acids in human subjects	25
Chapter 3: Detailed analysis of the digestibility of prebiotic fructo- and galacto-oligosaccharides in the human small intestine	85
Chapter 4: A toolbox for the comprehensive analysis of small volume human intestinal samples that can be used with gastrointestinal sampling capsules	119
 <i>Part II. Tissue-specific effects of butyrate on fuel handling</i>	
Chapter 5: The effects of butyrate on induced metabolic-associated fatty liver disease in precision-cut liver slices	155
Chapter 6: Butyrate enhances insulin sensitivity and glycolysis in myotubes: role of fatty-acid oxidation	184
Chapter 7: General discussion	219
