Acknowledgments

I was always really looking forward to the moment when I could finally write my acknowledgements and I can now say that the feeling is great. This PhD has been quite a ride and I am really happy I pushed through when things weren’t going my way. I guess like many other PhDs the lows are very low and the highs are very high. I could not have done this without the help of many people whom I would like to properly thank here.

I would like to start with thanking my first promotor Ben Feringa. Dear Ben, the first couple of years have definitely not been easy, but you kept your trust in me and ultimately things started to work out and I could enjoy the rest of the time in the lab. The circumstances you have created for us to work together with colleagues inside, but also outside, our group are fantastic. Your drive and enthusiasm are unprecedented and really helped my research forward. Thank you for allowing me to do my PhD in your group.

Wesley, my second promotor, thank you so much for the advice/help/suggestions over the years. This has been quite fundamental in the progress of my work. You have an opinion about literally everything, which makes it always entertaining to talk to you. Thanks that I could always simply send you a message whenever I faced problems in the lab, it was like a free PhD helpline.

Thanks to my reading committee: Prof. Joost Reek, Prof. Gerard Roelfes, and Prof. Martin Witte for taking the time to read my thesis. Professor Roelfes, luckily for lab 15 your music was occasionally louder than ours, but I also want to thank you for your open door policy and the discussions about HPLC best practices.

I would like to acknowledge my opposition committee: Prof. Edwin Otten, Prof. Paolo Pescarmona, Prof. Bas de Bruin, and Prof. Yuriy Román. Edwin, I started my bachelor research in the lab where you just started as assistant professor. Already during that time, I asked you a great deal of questions and I never stopped doing that throughout my masters in your group, but also later. So I not only want to thank you for measuring my X-ray crystals, but mainly for all the energy and time you invested in me over the years. I owe you. Special thanks to Yuriy for hosting me in Boston for my Master thesis ChemE and for being a fantastic person. Obviously it was a penalty during Netherlands-Mexico when Robben was tackled.

To my paranymphs Douwe Sjirk and Sven, thanks for standing beside me during my defense. Douwe Sjirk we already met during an open-day introduction for chemistry and started our bachelors together. We did our bachelors, masters and PhD at the same time and we are definitely part of the furniture of the university. Thanks for being a great friend from the early beginnings when we started and I’m convinced we will keep on seeing each other now that we finally go our separate ways. Sven, it was always great to have you around in lab 15 with your daily visits, we share a lot of the same interests and I have always enjoyed our Champions League evenings even though we always talked straight through the game. I also think it’s awesome how there is a mathematic proportionality between the position of your eyelids and the alcohol level in your blood. Good luck with finishing your PhD!

To all the collaborators thanks a lot for all your help! Brian, thanks for your DFT calculations and for the electrochemistry related discussions we had. Wesley and Linda, thanks for helping with measuring EPR spectra. Huge thanks to Prof. Bas de Bruin for enabling me to measure additional EPR spectra in Amsterdam and for the simulation of the spectra, but also your willingness to answer every question that
came up during these meetings. **Prof. Ryan Chiechi** thanks for the possibility to collaborate on the project described in chapter 3 and your enthusiasm. **Saurabh** thanks for the collaboration which started when I was staring at one of your posters in the hallway of building 18. Thanks to **Prof. Maria Loi** for the possibility to work on OFETs together and to **Karolina Tran** and **Eelco Teekelenburg** for measuring OFET characteristics and photoluminescence, respectively. **Matteo Miola** the plastic pieces to hold the electrodes were fundamental for the research work in chapter 6, thanks!

Thanks to all the department staff for the support. **Oetze**, grote beunhaas! The first time we spoke was when I just started my Bachelor research project and I tried to go to the restroom where you started talking about brain surgery. I remember standing there for 20 minutes. Since then it has always been great to talk to you, but I also want to thank you a lot for all the technical help you provided over the years. Especially the trolley we made for the Echem equipment has come in handy. I still don’t know if I should take it as a compliment that you named your dog after me. You get too much joy from telling Marco to sit. Special thanks to **Tiiiiiiiiineke**! What I always loved is that I did not have to read if you were going to be in your office. By entering the building, you would simply follow the smell of your perfume back to your office. Besides all the help and advice you gave me during the PhD I mostly enjoyed the inappropriate jokes, especially when also **Inge** was still there. Thanks that your door was always open and for keeping the group running! **Anouk** and **Romain**, thanks for all your help as well. **Mevrouw Witter-Waalkens**, I think I have never called you by your first name. Thanks for being so patient as neighbor of Anirban and me. You must have been close to calling the police at least ten times. **Gael**, sorry for screaming your name through the hallways every time I saw you. **John de Boer** thanks for gluing things together. **Pieter** and **Johan** thanks for the assistance with the NMR measurements, **Jacob Baas** for the SQUID measurements, **Renze**, **Monique** and **Theodora** for mass spec and HPLC measurements, and **Hans** for elemental analysis. Sorry that I called you late in the evening **Renze** when the HPLC was giving me problems (while you were just eating your daily potatoes). Aan de heer **Navest** thanks for your help with all the bureaucratic stuff and sorry for being always, but really always, late with writing down my hours, but you are honestly pretty funny when you are upset. Thanks to the people of the store: **Rik** (another person who gets really funny when he’s upset, which was basically every day you had to work behind the counter), **Klaas**, **Jelmer** and everyone else. Finally, thanks to **Johan Luchies** for being a great guy and for giving me an optical headache with his fluorescent jacket.

**Anirban**, my man/maharaja/prince/शििु! We started together in the lab of building 15 and very fast we were known as the married couple. You started of pretty shy, but soon became very very Dutch saying exactly what you thought, which oftentimes was very very funny and far too inappropriate to mention here. I honestly had a great time with you, from working until late, having dinners together in a restaurant or at my place, but what I also always really enjoyed was the insanely loud Indian music we played in the lab; I think the entire hallway with all professors are very relieved that we finally left. It was also great we could support each other when things weren’t working out in the lab. I still feel bad that I reported your mother to Whatsapp after she send me a nice message, but I did not recognize the number. You are a great friend, thanks for everything!

**Toyoda San**, your arrival in the lab of building 15 marks the best period in the lab together with Anirban. Despite your belief that it is not necessary to eat vegetables and fruit, but it suffices to eat ice-cream for dinner, you were working very hard full of energy. I honestly have no idea how to qualify your diet. We had a great time both in the lab, but also outside of the lab, having dinners together with Ani. You also taught me a lot about your home country which I will definitely visit. Better make the reservation to Sukiyabashi Jiro already now!
To all the people who joined the little kingdom of the lab in building 15: Jiawen, Lotte, German 1 (Simon), German 2 (Sven Klare, great singer to book for weddings and parties), Jiaxin (thanks for telling me every time you did not like my outfit), Albert, and the many students, thanks for creating such a good atmosphere! Simon, thanks for making me laugh one time. You are a great researcher, good luck with your group.

To the students I supervised: Andries (Hibiscus), from not wanting to do any electrochemistry to the coming submission of a paper on an electrochemical conversion! You worked very hard, but were also great to have around. Katrin, you did your bachelor research with me and I also want to thank you for your commitment during these couple months.

There were also people not working in lab 15, but for some reason happened to be there every day: Greg, you have been very important in my research. From the moment you arrived and started giving advice things started moving much faster. You are one of the smartest guys I ever met, but overall I value our friendship even more. Never ever wear khaki pants again. Best of luck to you and Ruth (also thanks for the short collaboration we had on a project) back in the US. Paco and Jeffrey (#####baas) passed by regularly to discuss Formula 1 and to steal our cart. It was also always nice to see Vanda and Daisy passing by for a chat. Some people did not enter lab 15, but had to involuntarily listen to entire conversations (which for me and Anirban meant screaming from one side of the lab to the other): Marta (thanks for being a great neighbor and simply very fun to talk with), Tilde, Juanfer, and Mamen sorry for the noise!

Thanks to the lunch group Lukas, Niklas, Sven, George (also thanks for the collaboration on the upgrading of furfural and all the distillations you have done for me), Anirban, Pier, Folkert (thank you for measuring a crystal for me), Jelte (thanks for helping with the spectroelectrochemistry), David, Jorn, Tobias, Max S., Max F., Albert, and Thomas: I am very happy there are no recordings of what was discussed there, but also that we rarely discussed chemistry.

To the previous and current members of the Feringa Group: Thanks for the good times, Jose, Sander, Filippo, Michael L., Henrieke, Mickel, Shaoyu, Fan, Jinyu, Youxin, Yuanxin, Qi, Dan, Damian, Jaime, Bianka, Michael Kathan (thanks for your fashion advice, I’m still waiting for the sweater you recommended me so I can look like a squatter and also thanks for all the chemistry advice, it was much appreciated), Cosima, Carlijn, Jana, Rutger, Hugo, Ainoa, Marco O., Adrien, Fern, Hugo, Franco, Stefano C., Nadja, Stefano P., Dusan, Thomas, Depeng, Jinling, Carla, Max K., Friederike, Mark, Robert, Vladimir, Diederik, Lucien, and Yuchen. I hope I did not forget anyone, but if I did, thanks to you as well!

Thanks to many people from other groups: Giovanni, Jorn, Hans, Linda, Ruben, Maurits, Tizian, Teo (de Janeiro), Kristopher, Sandeep, Juan, Francesco, Davide, Yanxi, Giulia, Rachael, Beibei, Alessandra, Antonio, Ruben, Ana, Reuben, Reinder, Dowine, Roos, Balint, Jim, Cora, Rudy, Titia, Mathijs, Esther, Luo, and Juana. Special thanks goes out to Sebastien (mon petit Perdriau), Claudia, Raquel (Puenteritas), and Matt.

I have also been part of the glovebox supervising team. Anastasiia, you basically forced me to be a glovebox supervisor, but after starting this together with Ankush it was nice to see these boxes in a good condition. Roxana, you joined later and have probably seen me almost the angriest I’ve been during the PhD when, on a late Friday afternoon, we found out that the vacuum pump of the glovebox broke down. After struggling for a long time to replace it, we found that its replacement was also not working properly; I was close to throwing both pumps through the window. We both had to spend a lot of time using the
glovebox and it was always nice to talk to you (whenever we were not competing over glovebox time haha).

During my PhD I attended multiple conferences and workweeks some of which were absolutely legendary. Of course it was all about science in the first place. From NCCC to Chains conferences, but especially the workweek in Schiermonnikoog was insane. Also the workweek in Berlin turned out to be really nice where the dinner in a ballroom was a highlight. Later that night I ended up giving a poster presentation about my research in a kebab store. I remember explaining how my work could cure many deceases. Finally, the trip to Southampton with Luuk for an electrochemistry summer school has been great for getting training and feedback from experts in the field. Unfortunately, these experts were not willing to be part of our Backstreet Boy group in a karaoke sing-along. Also other events during the PhD, such as Noorderzon, the JazzFietsTourFestival, Beer and Wine festivals with many different people have been amazing.

Whenever there was some free time outside of the lab (during both masters and PhD) it was also always good to see friends not working in the chemistry field: Tim, Martijn, Daan, Eline, Ron, Laura, Jasper, Rolf, Maarten, Martin, and Suzanne thanks for these relaxing moments. Tim, thanks for listening to all my frustrations without interruption while we were in the gym! Daan, you started your bachelors together with Douwe and me and I really like that we have the same passion for food, wine and beer and could enjoy multiple beer and wine festivals together with Eline and Francesca.

Thanks to the University of Groningen for providing a chocolate bar when they said they would support PhD students during the corona pandemic. This was indeed much better than financial support.

Alla mia famiglia italiana: grazie per avermi sempre accolto così calorosamente quando visitiamo l'Italia! E un ringraziamento speciale a Nonna Lia per avermi insegnato le complessità della cucina italiana!

Aan mijn familie: Iris, Christian, Judith, Frank, en Leon bedankt voor de nodige ontspanning met etentjes, of alleen al met een simpel bezoek, wat we in de toekomst hopelijk wat frequenter kunnen doen.

Aan mijn ouders. Ik kan jullie niet genoeg bedanken voor alle steun over de jaren. Het is altijd goed om weer even thuis te zijn, want op de een of andere manier vallen alle zorgen dan weg. Ondanks dat jullie je lachend wel eens af vroegen waar het toch mis is gegaan in de opvoeding denk ik dat de onbezorgde jeugdjaren die Judith, Iris en ik hebben gehad ons veel hebben gebracht.

Francesca thank you so much for your unconditional support over the years. It feels really good to know you always have my back. Thanks for understanding me and for making me laugh (of which many times unknowingly haha). I very much look forward to our future together! I love you.

Marco
