Multi-loop Hysteresis and Recursive Remnant Control

Marco Augusto Vasquez Beltran

**university of
 groningen**

The research described in this dissertation has been carried out at the Faculty of Science and Engineering, University of Groningen, the Netherlands.

DSSC

Data Science & Systems Complexity

The research reported in this dissertation was funded by the Center of Data Science & Systems Complexity (DSSC) Doctoral Programme through a Marie Skłodowska-Curie COFUND (DSSC 754315).

disc

The research reported in this dissertation is part of the research program of the Dutch Institute of Systems and Control (DISC). The author has successfully completed the educational program of DISC.

Multi-loop Hysteresis and Recursive Remnant Control

Proefschrift

ter verkrijging van de graad van doctor aan de
 Rijksuniversiteit Groningen
 op gezag van de
 rector magnificus prof. dr. C. Wijmenga
 en volgens besluit van het College voor Promoties.

De openbare verdediging zal plaatsvinden op

vrijdag 27 mei 2022 om 11:00 uur

door

Marco Augusto Vasquez Beltran

geboren op 27 september 1991
 te Orizaba, Veracruz, Mexico

Promotors

Prof. dr. ir. Bayu Jayawardhana

Prof. dr. Reynier F. Peletier

Co-promotor

Dr. Robert Huisman

Beoordelingscommissie

Prof. dr. ir. Jacquélien Scherpen

Prof. dr. Fayçal Ikhoulane

Prof. dr. Marcel Heertjes

To my family and friends.

Acknowledgments

On 28th January 2018, I arrived to the Netherlands to start a new journey in my life. The last four years have been full of incredible experiences, and despite having also faced very difficult times, I have known many amazing people and learned, enjoyed, and grown immensely as a person.

The first person I would like to thank is my supervisor, Prof. Bayu Jayawardhana, for allowing me to conduct research in the DTPA, and for all guidance, lessons, growing opportunities, constructive criticism, and incredibly huge patience. It is still amazing to me the level of commitment and dedication you have with your students. I sincerely thank my reading committee members, Prof. Jacquélien Scherpen, Prof. Fayçal Ikhoulane, and Prof. Marcel Heertjes. I give special thanks to Olga Maria Gutierrez Bautista for accompanying me during the beginning of my PhD journey and for designing the cover of this thesis. I would like to give my special thanks to my collaborators part of the Hysteretic Deformable Mirror project, Dr. Robert Huisman, Prof. Monica Acuautla Meneses, and Anja E. M. Schemerbauch. Working with you has been a very enriching experience. Also, special thanks to Prof. Monica Acuautla Meneses, for all the patience and training to use the equipment at the ZIAM Lab and the valuable data of the piezoelectric sample pellets.

Additionally, some of my most sincere thanks go to my friends and colleagues. Firstly, I extremely thank Dr. Rodolfo Reyes Baez, a colleague and friend who I met in Mexico during my years at CINVESTAV, for introducing me to Prof. Bayu Jayawardhana and for always encouraging me to take proper care of my social life in Groningen. Special thanks to Dr. Luis Pablo Borja Rosales and his wife Celia Castañón. You were some of the first persons I met in Groningen and it is because of you that my Mexican cuisine nostalgia remained calmed. Special thanks to Anja E. M. Schmerbauch for the collaboration and the pool club evenings with Pablo and Celia. Special thanks to Carmen Chan Zheng, for being a friend and quarantine buddy. I cannot imagine how the pandemic would have been without you. Also to Kathinka Frieswijk, for all the very interesting and endless talks in the office, and for translating the summary of this thesis

into Dutch. Thanks to Dr. Weijia Yao, Miao Guo, Agung Prawira Nawira, for the good talks and the discussions about the DISC homeworks. Thanks to all my colleagues and former colleagues in DTPA: Prof. Yu Kawano, Dr. J sus Barradas-Berglind, Dr. Xiadong Cheng, Dr. Lorenzo Zino, Dr. Michele Cucuzzella, Zaki Almuzakki, Emin Martirosyan, Dr. Alain Govaert, Dr. Carlo Cenedese, Santiago Sanchez-Escalonilla Plaza, Arijit Sarkar, Praveen Kumar Pakkirisamy, Ningbo Li, Linda Ong, Wouter Baar, T bitha Esteves, Dr. Nelson Chan, Dr. Bahadir Saltik, Frederika Fokkens, Martin Stokroos, Simon Busman.

Contents

1	Introduction	1
1.1	Hysteresis loops	1
1.2	Remnant control of hysteretic systems	3
1.2.1	Deformable mirrors and the HDM concept with remnant control	4
1.3	Contributions of this thesis	6
1.3.1	Butterfly and multi-loop Preisach hysteresis operator	6
1.3.2	Absolute stability with butterfly and multi-loop Preisach hysteresis operator	6
1.3.3	Butterfly and multi-loop Duhem operator	6
1.3.4	The remnant control	8
1.3.5	The HDM concept remnant control	8
1.4	List of publications	8
2	Preliminaries	11
2.1	Hysteresis operators	11
2.2	The clockwise and counterclockwise relay operator	13
2.3	The Preisach hysteresis operator	15
2.4	The Duhem hysteresis operator	16
3	The Preisach hysteresis operator	19
3.1	The Preisach butterfly hysteresis operator	19
3.1.1	Numerical example: Preisach butterfly operator with symmetrical two-sided weighting function	25
3.2	Preisach multi-loop hysteresis operator	28
3.2.1	Domain Ω_c in weighting function of Example 3.1.1	32
3.2.2	Numerical example: crossover points in single-oriented hysteresis loop	33
3.2.3	Numerical example: Preisach multi-loop hysteresis operator	36

3.3	Conclusions	38
4	Absolute stability of systems with butterfly and multi-loop hysteresis	41
4.1	Input-output rate property of the Preisach butterfly hysteresis	41
4.2	Set stability with Preisach butterfly hysteresis in the feedback loop . . .	47
4.2.1	Numerical example: Lur'e system with butterfly hysteresis operator	49
4.2.2	Numerical example: Lur'e system with multi-loop hysteresis operator	49
4.3	Conclusions	51
5	The Duhem model	53
5.1	The Duhem operator accommodation property	53
5.1.1	The Duhem operator with monotonic inputs	54
5.1.2	The Duhem operator with a periodic input	56
5.1.3	Case Example: the Bouc-Wen model	65
5.2	The Duhem butterfly operator	67
5.2.1	Example of a Duhem butterfly operator	77
5.2.2	Duhem butterfly operator with real data	78
5.2.3	A counter-example of Duhem operator with multi-loop behavior	80
5.3	Conclusions	81
6	The recursive remnant control algorithm	83
6.1	The remnant control problem of the Preisach hysteresis operator	83
6.2	The properties of the remnant rate of the Preisach hysteresis operator . .	85
6.3	The recursive algorithm for the remnant control of the Preisach hysteresis operator	92
6.4	Numerical example: Preisach butterfly hysteresis operator remnant control	94
6.5	The remnant control problem of the Duhem hysteresis operator	94
6.6	The properties of the remnant rate of the Duhem hysteresis operator . .	98
6.7	The recursive algorithm for the remnant control of the Duhem hysteresis operator	100
6.8	Numerical experiment: Miller hysteresis model remnant control	101
6.9	Conclusions	104
7	The HDM concept remnant control	105
7.1	The HDM platform overview	105
7.1.1	The mirror thin plate model	106
7.1.2	The electrically coupled actuators model	110

7.2	The control algorithm for the Preisach hysteresis operators with coupled inputs	112
7.2.1	The remnant rate of the Preisach hysteresis operators with coupled inputs	112
7.2.2	The monotonicity of the remnant change of the Preisach hysteresis operators with coupled inputs	114
7.2.3	The recursive remnant control algorithm for Preisach hysteresis operators with coupled inputs	117
7.2.4	Numerical example: remnant control of Preisach hysteresis operators with coupled inputs	122
7.3	The HDM control algorithm	124
7.3.1	Numerical example: remnant control of HDM platform	124
7.4	Conclusions	127
8	Conclusions and Open Problems	131
8.1	Conclusions	131
8.2	Open Problems	132
	Bibliography	134
	Summary	143
	Samenvatting	145
