An abstract graphic in the top right corner consisting of overlapping, semi-transparent blue squares and rectangles of various sizes, creating a complex, layered geometric pattern.

APPENDIX

Acknowledgements

A large abstract graphic in the bottom left corner, similar to the one in the top right, featuring overlapping, semi-transparent blue squares and rectangles of various sizes, creating a complex, layered geometric pattern.

There are a number of people without whom this thesis would not be in the current form. To start, this thesis would not exist without my supervisors: Prof. Nomdo Jansonius, Prof. Arthur Bergen, and Prof. Harold Snieder. I am truly grateful for the remarkable opportunity they provided, for their suggestions, insightful discussion over the years, and for making me feel part of their research Unit groups in Groningen and Amsterdam. Their supervision encouraged me to grow as a researcher and I would not be the researcher that I am today without their guidance. I also want to thank the assessment committee members, consisting of Prof. Wiggs, Prof. Guryev, and Prof. Neidhardt, for taking the time to carefully read and assess my thesis, and making it shine.

Huge thanks go also to Peter van der Most for all the insightful suggestions and help, especially in the first years when many things were so blurry to me. My special gratitude goes also to Ilja Nolte, Jacoline ten Brink, Anneloor ten Asbroek, Adriana Iglesias González, Pieter Bonnemaïjer, and Jibril Hirbo for the inspirations, fruitful collaborations, and for the warm welcome that made me feel always as at home.

On this journey, I met new friends. Catarina Rodrigues João, who I thank for all the special moments, the coffee/tea, lunches, dinners, and office talks. Her presence made the difference during this time and I am very happy to have met her and have shared this exciting period together. I am grateful to have met Sandra González Torrecilla, such a solar and positive person, and with an inspiring attitude. Definitely, her love for Italy made us closer. Thanks go also to all the EGRETErs (Azzurra, Sina, Nigus, Giorgia, Birte, Tuomas, Lorenzo, Anna, Asterios, Shereif, Philip, Rijul, Vincenzo and Konstantinos) for the special moments we had during the workshops in Groningen and around the Europe, and during the secondments, both in Amsterdam and Magdeburg. In Groningen, I also met Laura Kamp, the best, ever roomie that one can dream of. I enjoyed a lot our afternoon conversations with coffee and I wish her all the beautiful things she desires. My most sincere thanks to those who made work everything smoothly at the UMCG and did an exceptional job: Kim, Diana, Ella, Aukje, and Richard.

I am also grateful to the wonderful and bright researchers I had the privilege of meeting in the group of Prof. Åsa Johansson (Åsa, Daniel, Fatemeh, Julia, Mathias, Richel, Therese, Torgny, and Weronica), who are invaluable in advancing my professional development. I can only be more inspired by your attitude toward work.

Finally, a special and huge thank goes to my family, for their constant care and love, and Danilo, the person who has, no matter what, believed in all of this journey, showing always extreme curiosity and cleverness. For sure, I have to apologize for being always glued to chair/PC during all the weekdays and many weekends, but so many funny moments and jokes also raised from all of this.

Danilo, you have encouraged me to be what I wanted to be and to become the best version of myself. Please, Danilo, consider this thesis yours as it is mine. I can only admire you.

Valeria Lo Faro
