# Animal personalities on the move

Aparajitha Ramesh

The research presented in this thesis was carried out at the Theoretical Research in Evolutionary Life Sciences (TRÊS), Conservation Ecology (ConsEco) and Evolutionary Genetics, Development & Behaviour (EGDB) departments at the Groningen Institute for Evolutionary Life Sciences (GELIFES) of the University of Groningen (The Netherlands).

Aparajitha Ramesh received a PhD scholarship grant from the 'Adaptive Life' scholarship program from the University of Groningen. Part of the work was also supported by funds from the European Research Council (ERC Advanced Grant No. 789240), the Netherlands Organization for Scientific Research (NWO-ALW; ALWOP.668), the Gratama Foundation to AR (2020GR040), the Dr. J.L. Dobberke Foundation (KNAW WF /3391 /1911), and the Waddenfonds (Ruim Baan voor Vissen 2). The printing of this thesis was funded by the University Library and the Graduate School of Science and Engineering of the University of Groningen.

## **Animal personalities on the move**

ter verkrijging van de graad van doctor aan de  
Rijksuniversiteit Groningen  
op gezag van de  
rector magnificus Prof. dr. C. Wijmenga  
en volgens besluit van het College voor Promoties.

De openbare verdediging zal plaatsvinden op

dinsdag 30 Augustus 2022 om 11.00 uur

door

**Aparajitha Ramesh**

geboren op 25 Juli 1993  
te Madras, Tamil Nadu, India

**Promotores**

Prof. dr. F.J. Weissing

Prof. dr. A.G.G Groothuis

**Co-promotor**

Dr. M. Nicolaus

**Beoordelingscommissie**

Prof. dr. A.M. Bell

Prof. dr. K. van Oers

Prof. dr. M.E. Maan

# Contents

<b>1 Introduction</b>	<b>1</b>
Why study individual variation? . . . . .	2
A brief history of animal personality . . . . .	3
Implications of animal personality . . . . .	4
An integrative approach to studying animal personality . . . . .	5
Links between movement and personality . . . . .	5
Implications of individual variation in movement tendencies . . . . .	6
Outline of this thesis . . . . .	7
Empirical study system . . . . .	7
Field studies – migrant and resident sticklebacks . . . . .	8
Lab studies – personality tests . . . . .	10
Mesocosm studies – experiments under semi-natural conditions . . . . .	11
Theoretical studies . . . . .	12
Modelling the implications of variation in movement strategies . . . . .	13
<b>2 Habitat fragmentation induces rapid divergence of migratory and isolated sticklebacks</b>	<b>15</b>
Introduction . . . . .	16
Methods . . . . .	20
Study populations and data collection . . . . .	20
Behavioral assays . . . . .	21
Statistical analyses . . . . .	24
Results . . . . .	25
Morphological differentiation . . . . .	25
Behavioral differentiation . . . . .	27
Behavioral syndromes . . . . .	27
Discussion . . . . .	27
Phenotypic divergence between derived residents and ancestral migrants . . . . .	27
Rates of phenotypic change . . . . .	32
Population differences in syndromes . . . . .	32
Conclusions . . . . .	33
Acknowledgements . . . . .	33

<b>3 Does genetic differentiation underlie behavioural divergence in response to migration barriers in sticklebacks? A common garden experiment</b>	<b>41</b>
Introduction . . . . .	42
Methods . . . . .	44
Study populations . . . . .	44
Lab-bred F1 juveniles . . . . .	44
Individual identification . . . . .	46
Large-scale movement tendencies in mesocosm (migratory tendencies) . . . . .	46
Lab behaviour assays . . . . .	47
Statistical analyses . . . . .	50
Results . . . . .	50
Discussion . . . . .	51
Acknowledgements . . . . .	55
<b>4 Mesocosm experiments reveal the loss of migratory tendencies in a recently isolated population of three-spined sticklebacks</b>	<b>61</b>
Introduction . . . . .	62
Methods . . . . .	64
Mesocosm system . . . . .	64
Experiment 1 . . . . .	64
Experiment 2 . . . . .	64
Analyses . . . . .	65
Results . . . . .	65
Discussion . . . . .	66
Acknowledgements . . . . .	68
<b>5 Individual personalities and not the social context predict movement tendencies in three-spined sticklebacks</b>	<b>73</b>
Introduction . . . . .	74
Methods . . . . .	77
Study populations . . . . .	77
Experimental groups . . . . .	77
The mesocosm . . . . .	77
Monitoring movements . . . . .	78
Statistical analysis . . . . .	78
Results . . . . .	79
Pond crosses . . . . .	79
Latency to exit the first pond . . . . .	79
Discussion . . . . .	79
Acknowledgements . . . . .	82
<b>Intermezzo: Details matter when modelling the effects of animal personality on the spatial distribution of foragers</b>	<b>87</b>
Personality variation and the IFD . . . . .	88
Problems with the technical implementation of the model . . . . .	88

---

Effects of population size . . . . .	90
Quantifying the approach to the IFD . . . . .	92
Analysis of the mud crab system . . . . .	92
Outlook . . . . .	93
Acknowledgements . . . . .	94
<b>6 Ideal free distribution of unequal competitors: spatial assortment and evolutionary diversification of competitive ability</b>	<b>95</b>
Introduction . . . . .	96
Models and Results . . . . .	98
Spatial assortment: good competitors prefer resource-rich patches . . . . .	99
Evolution of competitive ability . . . . .	100
Changing environments: evolution of competitive diversity . . . . .	102
Discussion . . . . .	104
Acknowledgements . . . . .	107
<b>7 General discussion</b>	<b>115</b>
What we started out to do . . . . .	116
Partial migration in sticklebacks . . . . .	116
A compromise: migrant – resident system . . . . .	117
What can we learn from the sticklebacks? . . . . .	118
Migrants and residents: in a nutshell . . . . .	118
Is there a migration syndrome in sticklebacks? . . . . .	118
What happens when populations are reconnected? . . . . .	121
Perspectives on theoretical modeling . . . . .	122
Conceptual models . . . . .	123
Models tailored to empirical systems . . . . .	124
Modeling moving forward . . . . .	125
Closing remarks . . . . .	126
<b>Summary</b>	<b>129</b>
<b>Nederlandse samenvatting</b>	<b>133</b>
