In silico dissection of transcriptomes with a tumor immunology focus

PhD thesis

to obtain the degree of PhD at the
 University of Groningen
 on the authority of the
 Rector Magnificus Prof. C. Wijmenga
 and in accordance with
 the decision by the College of Deans.

This thesis will be defended in public on
 Wednesday 21 September 2022 at 16:15 hours

by

Carlos Gustavo Urzúa Traslaviña

born on 1st August 1990
 in Guadalajara, Mexico

Supervisor

Prof. E.G.E. de Vries

Co-supervisor

Dr. R.S.N. Fehrmann

Assessment Committee

Prof. J. Haanen

Prof. H.W. Nijman

Prof. L.H. Franke

Chapters

1	Introduction & Outline	2
2	Robust mTCs in 34,494 patient-derived samples and cell lines. <i>Cancer & Metabolism</i> , 9(1):35, 2021	8
3	Improving gene function predictions using independent TCs. <i>Nature Communications</i> , 12(1):1464, 2021	32
4	Transcriptional effects of CNAs in a large set of human cancers. <i>Nature Communications</i> , 11(1):715, 2020	58
5	Immune landscape of cancer and inflammatory conditions.	90
6	The ESMO-Magnitude of Clinical Benefit Scale visualisation.	104
7	Summary, Discussion and Future perspectives	118
8	Sammenvatting	129
9	Acknowledgements	133

Figures

2	Identification of metabolic transcriptional components (mTCs)	10
2	Metabolic TCs identify new genes potentially involved in metabolic processes .	13
2	Clustering activity scores of mTCs reveal multiple metabolic subtypes	14
2	Associations between mTCs and drug sensitivity for selected examples	16
2	Associations between mTCs and the composition of the immune tumor micro-environment for selected examples	18
3	Overview of the guilt-by-association methodology to calculate prediction scores	34
3	Distribution of prediction scores for both the ICA-TC and PCA-TC based method	36
3	ICA-TCs outperform PCA-TCs in predicting future gene-set memberships . . .	38
3	Correlation between prediction scores and gene multifunctionality	40
3	Relationship between the degree of transcriptional similarity and predictability among clusters of co-regulated genes	42
3	Predicted functions for uncharacterized genes using the Hallmark collection .	43
3	Predictions scores for genes found to be essential for DNA repair in a CRISPR-based screen	45
3	GENETICA predictions for other CRISPR-based screens	47
3	Median prediction scores and multifunctionality association for RNA-seq-based predictions	48
4	Data acquisition and decomposition of gene expression profiles	60
4	Transcriptional adaptation to CNA profiling (TACNA profiling)	62
4	Degree of transcriptional adaptation to CNAs	64

4	Degree of transcriptional adaptation to CNAs per individual gene	66
4	The landscape of transcriptional effects of CNAs in a large set of cancer samples	68
4	Transcriptional effects of CNAs in relation to inferred immunological phenotypes	70
5	Transcriptional Components associated with immune processes	96
5	iTC barcodes of inflammatory conditions	97
5	iTC perturbation barcodes for immune-modulating drugs	99
6	Sections of ESMO–MCBS visualisation	107
6	Visualisation of score that has pending data	107
6	Percentages of correct answers for different profession subsets	110
6	Visualisations with improvement in clinical benefit	111

Tables

3	Guilt by association methods	37
5	Immune modulation studies	95
5	Inflammatory condition studies	95
6	Conversion table of form modifiers and visualisation icons	108
6	Upgrades that result when mature evidence is obtained	109
