*The general essence of a man is his mind.
The general essence of a mind is prying.
The general essence of prying is a question.
A question brings research.
Good research discovers adequate answers.
A man would be able to incorporate an answer into his life.
This could improve his well-being and quality of life
and bring new questions
with new improved answers.
This is called an evolution.*

Contents

Part I General introduction

Chapter 1 Introduction	9
Chapter 2 Data source, measures and statistical analyses	19

Part II Self-rated health as a health outcome

Chapter 3 Self-rated health after kidney transplantation and the change in graft function	27
Chapter 4 Factors associated with self-rated health after kidney transplantation – a prospective study	41
Chapter 5 Anemia has a negative impact on self-rated health in kidney transplant recipients with well-functioning grafts: findings from an 8-year follow-up study.....	53

Part III Patient and graft mortality as a health outcome

Chapter 6 Anemia is an independent predictor of mortality in kidney transplant recipients: results from a 10-year follow-up study	69
Chapter 7 Self-rated health predicts mortality and graft loss after kidney transplantation: a 10-year follow-up study	83

Part IV Discussion of the study findings

Chapter 8 Discussion	97
