## Acknowledgements

Science and life are both made better by the help from and connections with those around you. Simple logic then indicates what this means for life science. I would first and foremost want to thank my supervisor Professor Ellen Nollen for her guidance and confidence as well as her help with so many things during my time in her lab and during the writing of this thesis. I would also like to thank the members of her group in Groningen for friendship as well as good collaboration and a shared experience.

Next I would like to express my appreciation for the members of the committee, Professor Kampinga, van Haastert and Slotboom in reviewing this thesis and for their useful comments. I would also like to thank Professor Kampinga and Slotboom for inspiration and fruitful discussions during my studies.

I would like to thank my co-supervisor, Professor Mulder for all his help and for all I have learned in his lab in Groningen and more recently in Aarhus, Denmark. Both visits were good times indeed. The same applies to my other co-supervisor, Associate Professor Andréasson. I wish him and the friendly member of his group all the best and I am very grateful for the chance to round of this work in his lab in Stockholm.

During my time in the Netherlands, I met many people that made a unique and positive impression that I will always carry with me. Whether across a lab bench or a bar, for sharing this time with me you have my thanks. To two individuals I would like to extend special thanks: my Polish friends Gosia and Agata who shared my office, many evenings and many good times. All my best for your future and keep in touch.

Lastly, my gratitude goes to Kathrin, my wife since a year almost to the day I defend this thesis. I would like to say that the ground fell away from my feet when I met you, but then I would have to admit it was probably due to the plane taking off back to Groningen. Thanks for keeping my feet on the ground after that, for all the help and patience in the writing of this thesis and for making what is to come seem so inviting. *I think this leads everywhere.*
