ACKNOWLEDGEMENTS

As the research study evolved, it appeared to be more challenging and daunting than ever before. The passion for the subject, and my resilient and persevering personality, however, kept me going.

During a research project, the supervisor is supposed to play a pivotal role, and I would like to thank Prof. Dr. Wim J.A. van den Heuvel for his cooperation. He also played an energetic role in shaping up the articles and finally, the thesis. My second supervisor, Prof. Dr. P. Arokiasamy from International Institute of Population Sciences (IIPS), Mumbai has been a supportive collaborator during the fieldwork in India, and later reviewing the articles and the thesis.

My co-supervisor, Dr. Jitse P. van Dijk provided several critical comments and guidelines towards preparation of the thesis. He has also been very helpful with the administrative work in the university, and patiently provided answers to my queries. I would also like to thank the members of the evaluation committee for their inputs to further improve the thesis.

I will like to acknowledge the support from many people, particularly at the former Institute of Rehabilitation Research (iRv), Hoensbroek; IIPS, Mumbai; and the participating rehabilitation/limb-fitting centers and limb-fitting camps. I'll like to thank the interviewers who collaborated in the data collection phase of the study.

I cannot stop myself from saying 'thank-you' to my companion, Aatish. He believed in my research project, and was a pillar of strength for me at difficult moments. He was also there to share the joys when the efforts finally came to fruition.

All the credit goes to my parents in India for nurturing me and making me the person I am today. My family members and especially, my grandfather have been very supportive and provided continuous encouragement.

Most importantly, I would like to thank all the amputees who participated in the study. I believe that the study results would provide additional insights and contribute to the holistic rehabilitation of the amputees, and eventually prove to be helpful towards improving their quality of life.

Lastly, I would like to use the skills and knowledge gained to continue contributing to the society and to make a positive impact in the lives of people.
