**Dissecting yeast-dependent population
differentiation and spatial segregation
in *Drosophila melanogaster***

Xiaocui Wang

university of
 groningen

faculty of science
 and engineering

This research has been carried out in the Evolutionary Genetics, Behaviour and Development (EGDB) group at the Groningen Institute for Evolutionary Life Sciences (GELIFES) according to the requirements of the Graduate School of Science (Faculty of Science and Engineering, University of Groningen, The Netherlands).

This research was supported by a joint scholarship of the China Scholarship Council (CSC) and the University of Groningen (awarded to XW, grant number 201709110152). Additional support was received from the research school of Behavioural Cognitive Neuroscience (BCN), University of Groningen and a grant from Dr. J.L. Dobberke Foundation.

Dissecting yeast-dependent population differentiation and spatial segregation in *Drosophila melanogaster*

PhD thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. C. Wijmenga
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on

Tuesday 15 November 2022 at 9.00 hours

by

Xiaocui Wang

born on 25 October 1990
in Hubei, China

Supervisors

Prof. J.C. Billeter
Prof. M.E. Maan

Assessment Committee

Prof. P. Becher
Prof. B. Wertheim
Prof. M. Egas

Table of Contents

Chapter 1.....	7
<i>General introduction</i>	<i>7</i>
Dietary adaptation	8
Study system.....	10
Thesis overview	14
Chapter 2.....	17
<i>Seven questions on the chemical ecology and neurogenetics of resource-mediated speciation</i>	<i>17</i>
Abstract	18
Introduction	19
Question 1: Which aspects of the food resource are heterogeneous?	21
Question 2: Which aspects of the food resource exert selection on consumers?	22
Question 3: How are consumer chemosensory systems tuned to detect and identify a novel food resource?	23
Question 4: Which trait allows the consumer to successfully exploit the food resource?	25
Question 5: Are exploitation and sensory detection genetically linked?	26
Question 6: How does phenotypic plasticity contribute to the successful exploitation of a novel food resource?.....	28
Question 7: How do individuals that adapted to an alternative food resource become reproductively isolated?.....	29
Discussion	31
Acknowledgements	34
Chapter 3.....	35
<i>Lack of alignment across yeast-dependent life- history traits may limit Drosophila melanogaster dietary specialization</i>	<i>35</i>
Abstract	36
Introduction	37
Materials and Methods	38
Results	45
Discussion	49
Author contributions.....	53
Acknowledgements	53
Supporting information.....	54

Chapter 4.....	59
<i>A system for automated quantification of the foraging and sexual behaviour of <i>Drosophila melanogaster</i> in heterogeneous environments</i>	59
Abstract	60
Introduction	61
Protocol	62
Representative Results.....	68
Discussion	71
Acknowledgments	73
Supplementary information	74
Chapter 5.....	77
<i>Spatial coupling of food and mates in <i>Drosophila</i></i>	77
Abstract	78
Introduction	79
Materials and methods.....	81
Results	85
Discussion	94
Supplementary information	97
Chapter 6.....	101
<i>Synthesis</i>	101
Concluding remarks.....	105
Future work	105
References	109
English Summary	135
Nederlandse Samenvatting	139
Acknowledgements.....	143
Publications.....	149
