Molecular Conductance

Synthesis, Self-Assembly, and Electrical Characterization
of π -Conjugated Wires and Switches

Hennie Valkenier

University of Groningen
**Zernike Institute
for Advanced Materials**

The work described in this thesis was performed in the research group Chemistry of (Bio)Molecular Materials and Devices, Molecular Electronics, Stratingh Institute for Chemistry and Zernike Institute for Advanced Materials, University of Groningen, The Netherlands. This research is financially supported by NanoNed, funded by the Dutch Ministry of Economic Affairs (project GMM.6973).

Cover design: Bart, Roelie, and Hennie Valkenier
Produced by: F&N Boekservice

Molecular Conductance

Synthesis, Self-Assembly, and Electrical Characterization
of π -Conjugated Wires and Switches

Proefschrift

ter verkrijging van het doctoraat in de
Wiskunde en Natuurwetenschappen
aan de Rijksuniversiteit Groningen
op gezag van de
Rector Magnificus, dr. E. Sterken,
in het openbaar te verdedigen op
vrijdag 1 juli 2011
om 16.15 uur

door

Elisabeth Hendrica Valkenier - van Dijk

geboren op 11 augustus 1983
te Roden

Promotor: Prof. dr. J. C. Hummelen

Beoordelingscommissie: Prof. dr. M. Mayor

Prof. dr. Th. Wandlowski

Prof. dr. ir. H. S. J. van der Zant

Table of Contents

Chapter 1 Molecular Electronics	7
1.1 Introduction	8
1.2 π -Conjugated Molecules in Organic Electronics	8
1.3 Opportunities of π -Conjugation Topologies	11
1.4 Methods for Conductance Measurements	15
1.5 Our Matrix Approach	22
1.6 References and Notes	26
Chapter 2 Anthraquinone- and Anthracene-based Molecular Wires and Switches	31
2.1 Introduction	32
2.2 Synthesis of the Anthraquinone- and Anthracene-based Molecular Wires	37
2.3 Optical Properties	43
2.4 Redox-Switching of the Anthraquinone Wire	46
2.5 Energy Levels	50
2.6 Crystal Structure	52
2.7 Conclusions	53
2.8 Experimental Section	54
2.9 References and Notes	66
Chapter 3 Controlling the Formation of Self-Assembled Monolayers of Conjugated Thiols on Gold	69
3.1 Introduction	70
3.2 Synthesis of Oligo(phenylene ethynylene)s	72
3.3 Deprotection of Acetyl Protected Thiols and the Formation of SAMs on Gold	74
3.4 Composition of the SAMs by XPS	87
3.5 Electrochemical Characterization of the SAMs	90
3.6 Large Area Molecular Junction Devices	93
3.7 Conclusions	95
3.8 Experimental Section	96
3.9 References and Notes	104
Chapter 4 Trends in the Conductances of Three Series of π-Conjugated Molecular Wires	109
4.1 Introduction	110
4.2 Synthesis of the Molecular Wires	113
4.3 Optical Properties and Energy Levels	115
4.4 Conductance Measurements	116
4.5 Discussion	119
4.6 Transport Calculations	122

4.7 A Molecule in a Breaking Junction	124
4.8 Conclusions	127
4.9 Experimental Section	128
4.10 References and Notes	133
Chapter 5 The Influence of the π-Conjugation Pattern on Conductance	137
5.1 Introduction	138
5.2 Formation of Self-Assembled Monolayers	141
5.3 Conductance Measurements using Conductive Probe Atomic Force Microscopy	147
5.4 DFT-NEGF Transport Calculations	148
5.5 Conductance Measurements in EGaIn Junctions	150
5.6 Conductance Measurements in Large Area Molecular Junctions	152
5.7 Single Molecule Conductance Measurements	153
5.8 Conclusions	155
5.9 Experimental Section	157
5.10 References and Notes	160
Chapter 6 Methano[10]annulene in Molecular Wires and Polymers	163
6.1 Introduction	164
6.2 Synthesis of 2,7-Dibromo-1,6-methano[10]annulene	166
6.3 Methano[10]annulene-Based Molecular Wire	168
6.4 Copolymer of Methano[10]annulene and Bithiophene	171
6.5 Conclusions	176
6.6 Experimental Section	177
6.7 References and Notes	186
Chapter 7 The Matrix Approach Revisited	189
7.1 Results from the Matrix Approach	190
7.2 A Comparison of the Conductance of Monothiolated and Dithiolated OPE3	198
7.3 Perspectives of Molecular Electronics and π -Logic	203
7.4 References and Notes	206
Publications	209
Summary	211
Samenvatting	215
Dankwoord	223
