Acknowledgements

Like all good things, my PhD that I started approximately four and half years ago comes to an end. When I started my masters studies, little did I know that I would be graduating from the University of Groningen. My stay here in Groningen has been rewarding in every sense, and I am glad that I chose to come here for my studies. My journey in this period has enriched my scientific mind, along with which it developed me to cope with difficult and challenging times. Certainly this wouldn't have been possible without help from several people and I would take this opportunity to thank them individually.

I would start by expressing my gratitude to Prof. Banerjee, my promoter and supervisor. I express my deep appreciation towards you for having confidence in me and giving me this opportunity to work on this PhD topic. I thank you for the continuous guidance and motivation that you provided in the last four years. I truly appreciate your supervision in cleanrooms, experiments and their planning which helped produce and interpret scientific results quicker. Also, you introduced me to the scientific community and people from industry which led to some good collaborative work, broadening my understanding of the subject. You gave me many opportunities to present my work at international conferences. The freedom that you gave me to set up and manage my PhD research had a big influence on the person that I am now. Outside work, I cherished our discussions on several topics. Undoubtedly, your culinary skills are superlative and I savored all of them that you cooked.

Dear Prof. Noheda, Prof. Dörr and Prof. Koster; thanks for being my reading committee members and for the constructive suggestions to improve my thesis. Your suggestions and critical reading have made this thesis into its current form

now. Prof. Noheda, I thank you for allowing me to use the facilities in the SSME labs. The discussions and inputs in several of our meetings have been very useful and I learnt a lot from it. Prof. Koster, your inputs and suggestions in our different meetings helped me to further my insight in complex oxides.

I gratefully acknowledge my collaborators for their contributions. I thank Prof. B. Sanyal from Uppsala University for your inputs. I thank Carmine for the calculations and indeed our skype meetings have been very useful. Your prompt inputs allowed us to understand our data rather quickly. I also thank Prof. G. Rijnders and Prof. M. Huijben for helping me in my project. Our meetings were very useful and I especially thank you for allowing me to use your facilities at the University of Twente. I learnt new perspectives on complex oxides from you and your suggestions were always very instrumental. I truly appreciate the constructive discussions.

Thank you Prof. E. Y. Tsymbal and J. D. Burton for the theoretical inputs and the discussions. Definitely, your theoretical insights allowed to me to understand complex oxide interfaces in greater details. I would also like to thank Prof. J. Verbeeck and Ricardo for your TEM results and analysis. Indeed we had issues with the instrument made us wait long, but I am sure our work provided a new insight into non-polar complex oxide interfaces. I deeply acknowledge the contribution from all my collaborators.

I would like to thank Prof. B. J. van Wees. Your critical questions and suggestions have been very helpful. Your outstanding views allowed me to think beyond that benefited me a lot. Thanks to Prof. C. van der Wal for all the good discussions during group meetings and for creating a great atmosphere at group outings.

Dear Gaurav and Subir. You were my first friends in Groningen and I learnt a lot from both of you. Gaurav, thanks for your patience and intellect with which you introduced me to complex oxide; and our discussions have been very fruitful. In fact, I must say that I learnt nearly all the experimental techniques from you. Your intuition in thin film growth and sample fabrication actually taught me many different tricks to obtain good quality films. In addition, thanks for the lovely friendship. Subir, you have been a great buddy. I will always admire your perseverance and patience. With your patience and intellect, you explained me BEEM. Your scientific views and comments were very helpful. During the initial months of my PhD, I got a lot of help from you two in developing myself. Gaurav, Subir, outside work we have had great friendship, I have lovely memories of our trips and the great time we spent. Thanks a lot to both of you for everything.

Dear Saeedeh, Alim. I believe your inputs to my project have been instrumental. Thanks Saeedeh for helping me in my projects. You have been kind to answer my questions; and help me several times with AFM and XRD measurements. I learnt a lot from you. Alim, many thanks for hosting me several times for all the thin film growth and the measurements. Your suggestions on engineering the interfaces and your inputs in our meeting were very useful. Also, we did discuss a lot on our project over phone and I am thankful for it all.

I would like to thank Johan, Martijn, Herman, Tom and Jacob for helping me in several instances. Jacob, I deeply appreciate your help while I worked in SSME. You have been a great friend, and despite the work load you have always been approachable. For all immediate help in NanoLab, thanks Johan and Martijn. Johan, I was really touched by your efforts in trying to resolve my US visa issue back in 2014.

Ewout, you started working for your bachelors project earlier in our group. Once you were back and worked for your masters project, it was quite easy to teach you the experimental techniques. I admire how quickly you picked them up, and it was easier to work with you as you would be always approachable and ready to discuss more on our results. Your early work hours taught me a lot and your willingness to always help your colleagues put you as the most helpful student once. Our work on CFG spin valves was quite successful, although it is not a part of this thesis. All the best in your future endeavors. Symen, it was truly a pleasure to work with you. Being a bachelors student, your maturity impressed me and together we indeed performed some good measurements. Again, I wish you the very best too.

Sander Kamerbeek, I deeply thank you for all the discussions that we had. They indeed put new perspectives on my results. We joined on the same day and went on several conferences together, and I share good memories of our trips. For any question, your keen scientific ability often provided answers to them. I wish you all the best to your current work and thesis.

Roald, Eric; although we haven't had much overlap in our work, I have always cherished discussing with you on your projects. On a few occasions, I have had opportunities to work with you two and they were all pleasurable. I could teach you BEEM quite easily and you picked up well. Thanks to the both of you in giving me feedback on my talk slides and writing. I am really happy that both of you have accepted to be my paranymphs.

The many work discussions, coffee breaks, lunch breaks, borrels, group outings would not have been the same without everyone in the FND group. Jakko, you have been a great office mate. You could drag me to circuit training and I rate this ability as a very commendable one. Arijit, all our coffee and tuna salad lunch breaks have been memorable. It was really good to have known you as a friend and colleague. Sid, Juan, Ludo, Kumar, Jing, Jasper, Xu, Paul, Ivan, Magda, Nynke, Olger, Pep, Christian, Madhu, Fasil, Joost, Marcos, Alok, Eek, Juliana, Sander Onur, Alexy, Mallik, Eline, Bart, Crystal, Frank, Vincent, Thomas and anyone I might have forgotten, thanks a lot for your help and the good discussions that we have had many a times. Joroen, Mart, Arnoud, Justin; a big thanks for all the help that you provided to me in SSME. Not for a moment, I felt alone working in the labs. You people were always helpful and up for discussions. I wish you all the best in your future endeavors.

Outside of my work here, there were many people who made my PhD a great period of stay. Pranav, Vaishali, Nobina, Dipayan; some great times I have spent with you. Our meetings, although a few of them were always packed with fun. It is always great to meet you, anytime, anywhere. My working for GISA brought me to many other friends. Ekta, it has been great knowing you. Your sincerity towards your tasks is a great virtue; I wish you all the best. Tushar, Jasmine, Aakansha, Gopi, Harshad, Ketan, Ashish, Milon and all others who I have forgotten, I thoroughly enjoyed the time spent with you all. Thanks for inviting me over for dinner many times. I must also thank KALLOL and Klaas for organizing numerous cultural evenings and giving me an opportunity to listen to some great performances. Thanks Sanchita, Tani and Pritam for hosting me. I thoroughly enjoyed the time we spent and look forward to many more to come. Dear Satyen Sir, Sagnik, thanks for all the help.

Finally, I would like to express my deepest gratitude to my parents, and my brothers for their unconditional support all along. Your presence has been my strength. Maa, you have been my biggest support in almost every situation, words fall short to express how grateful I am. Thank you for everything.

Saurabh Roy
