## **Acknowledgements**

Here it is, the end of my PhD-time in Groningen. Amazing how fast time goes by. I remember how in the beginning us “newly arrived” were discussing daily how bad everything (especially canteen food) was in the Netherlands, how much better things were in our home countries, and so forth. Now, after more than four years in Groningen I have to say, that besides missing “my German bread” Groningen is not so bad, not so bad at all, and I have come to like the place a lot for many reasons. This of course has a lot to do with the people I met at work and outside University. Many played important roles one way or another over the last four years, and I would like to thank all of you.

First I want to thank my three supervisors Ido, Leo and Franjo for their support, help, and ideas concerning my thesis. Thanks a lot for introducing me to modeling, even though I was kind of reluctant in the beginning. You showed me what powerful tool modeling can be, and opened a completely new, interesting and useful field of possibilities to me. Many special thanks to Ido. Where shall I start? Thanks a lot for the input, ideas, and help especially when it came to modeling and statistics. Your Friesian humor is something one first has to get used to, but then definitely makes work much more fun. I want to thank Leo for his fast, reliable and structured comments and the way of dealing with experiments and manuscripts. Thanks for your input concerning my experiments and molecular work, and still letting me carry out my ideas. Thank you Franjo for keeping an eye on the broad picture and structure of my project. Thanks for your seemingly endless comments to experiments, models and manuscripts, in the end they meant a great deal of improvement.

I would like to thank the members of the reading committee Jacintha Ellers, Rick Shine, and Jan Komdeur for spending some of their valuable time on evaluating my thesis.

I want to thank all Theoretical Biology members for a great container-work environment. I will sincerely miss the work but mostly senseless lunch discussions, humor and activities. I thank the Evolutionary Genetics group for putting up patiently with the smell-nuisance of the flies. It was great fun sharing the lab with you and even more fun socializing at the borreltjes.

A special thanks goes to Magdalena I was sharing an office with, who became more than just my colleague. Thanks for making the countless hours in the

stinky fly cellar bearable. I very much enjoyed our regular fly discussions, and especially our after work and weekend activities.

I am very grateful to Bram for his support with R problems, work discussions and “worky-worky” motivation. I want to thank Cordula, Bernd F., my Robert Bosch fellows and Verena for all the fun time we had together, for all the scaling discussions, I hope our effort will be fruitful in the end. I am very grateful to Han Olff for his logistic support for my field work, to Jan Graf and Hassan Mkwizu for navigating me through Africa and their help with collecting flies, to Joop Price for his support with fly keeping, Rense Veenstra for his help in the lab, and to Ana Harts for her pioneer work on the skink models.

Many thanks to Cordula, Verena, Thomas, and Bernd who talked me into leaving the desk to enjoy water sport weekend activities. Hang loose! Speaking of which I want to thank Magdalena, Daan, Julia, Martin and Asia for sweetening after work hours and weekends with great food and all sorts of games. I am thankful to “The Girls”, Magdalena, Irene, Doretta, Marian, Aitana, Gudrun and Cordula, Verena, Vivian, Ika, Kristina, Kristin and Sarah for some very nice evenings, discussions, gossiping and fun nights.

Sorry to everyone who has not been mentioned here personally, please know that I haven’t forgotten you and that I am grateful for your friendship and time we spend together.

In the end my heartiest thanks go to Bernd, my Bernd, and my family. To Bernd for always being there for me with an open ear, for always believing in me, for being the realist in our relationship, and for all our fun time together. Many thanks to my family in a broad sense, but especially to my parents. Vielen Dank für Eure jahrelange Unterstützung bei allen meinen Plänen und Taten. Eure vielen Telefonate und E-mails mit Tipps und Tricks, Brenz Neuigkeiten und wenn nötig Aufmunterungen waren von unschätzbarem Wert. Ohne Euch hätte ich es nie so weit geschafft. Danke!

Barbara
