## Acknowledgments

Scientific research requires an open mind, clear of all restrictions that one learns and accumulates from everyday life. Tommy Dewar once said that “minds are like parachutes, they only function when they are open.” Judging my progress I feel that it is exactly there where dr. Michael Wilkinson, my supervisor, mentor and friend, has contributed the most. Michael has offered me the opportunity to prove myself through an intense work schedule which led to many exciting discoveries. His broad knowledge on a variety of topics inspired me in looking beyond the strict limits of our science. Loud discussions and arguments “ala mediterranee”, which were often misunderstood as war cries by several members of staff, were the source of all the scientific recipes that emerged. In life outside the university, both he and his wife Meiny stood by my side from the very first day of my stay in Holland (not to mention the fantastic dishes they prepared!!!). I thank you both a lot for all the things you did for me.

In the same spirit, I would like to thank my promotor Prof. Nicolai Petkov who assisted me in several ways including financial support for conferences and other events. Nicolai just like myself, appreciates good humor and that relaxes the working conditions. He is also a fan of delicate cuisine and I bet that is why he let me organize the group dinners. I would also like to acknowledge the contribution of dr. Michael Biehl in matters concerning intelligent algorithms and statistical learning. Though we did not have the opportunity to collaborate in a common project, Michael suggested a whole lot of interesting ideas and answered many of my questions in this field through a number of productive conversations and meetings.

Together with the members of the academic staff, I would also like to thank my colleagues, Aree Witoelar and his wife Cynthia, Lidia Sanchez, Florence Tushabe, Easwara Subramanian, Giuseppe Papari, Petra Schneider, Alle Meije Wink, Anarta Ghosh, Koen de Raedt, Michael Ten Caat, Ronald van den Berg and Alessandro Crippa. I specially thank Erik Urbach, Andrei Jalba and Michel Westenberg for their valuable contributions in source code, bug fixing and knowledge sharing. Without them I would be still lost in the Max-Tree jungle!

I am also expressing my gratitude to the secretarial staff of our department and more

specifically to Desiree Hansen, Ineke Schelhaas, Helga Steenhuis, Annette Korringa, Yvonne van der Weerd and Janieta de Jong. These ladies backed me up in countering the paperwork in a language I never managed to learn properly. A very very special thanks goes to Esmee D. Elshof, both a friend and a colleague who stood by my side in difficult times. Esmee, I honor your friendship and thank you for everything.

In the same way these ladies helped me with something I was totally lost with, Harm Paas and Jurjen Bokma helped me with Linux!!! Gentlemen thank you for your support and I apologize for trashing my linux box so often.

A great thank you goes to all my friends in Groningen with whom I have four wonderful years to remember. Mentioning them all would probably occupy more space than the scientific material itself, thus I would like to constrain the list to the following: my good friend Dimitris Arvanitis, Vassilis Linardos, Panagiotis, Giannis Vogeas, Grigoris and Nikoletta Vogeas, Evelina to kourkoutaki, Elenitsa Tsopanidou, the staff of La Femme Grecque and in general the Greek "clan" of Groningen and my friends in the Greek society of north Holland; my good friend Nico Gonzalez and his wife Marianna, Toma, Pasqual, Fred and the "petrol gang" of Groningen; the boys of the Equilibrium Delirium group, that is Mo, Rob, Azaria, and Aree; my special "balkano" friend Saša Martić and his sweet Olga, Paris Avgeriou and Sofia, Andrei and Cosmina Jalba, Alex Crippa and Ruut, Sophie van de Gevel, Smaranda Andreas and Adriana Krawczyk. A special thanks goes to my sweet Saskia Berrelkamp and her parents. Thank you for all your help, your warm hospitality and for all the other things you did for me. I might be forgetting a lot of things but one thing that never fades inside me is good friendship. To all the girls of Groningen to whom I owe an apology for my intolerable character I have to say that "I'll remember you in my will."

Finishing off, I would like say a great thank you to my family for supporting me and for their understanding all these years. Your "silent presence" everywhere I go gives me the feeling I am never far from home. Thank you for your persistence, for your backing and for making me who I am, a man who believes in himself. Mother, your best wishes were not realized by chance but from you being there for me. Foteini, I am truly sorry for the way things ended. Your heart was like a lighthouse to me, giving meaning and reason to my life. Both good and bad times through this adventure shaped me into a better person and for this I am really grateful to you. You are always in my heart and mind.

After a stormy period of time, this thesis was successfully completed thanks to the concrete persistence and support of a very special person, Despoina Tsinalidou. Despoina, your positive thinking brought me to where I am now. Thank you and stay always like this.
