Acknowledgements

The contents of this thesis as well as that of my other papers not discussed here has greatly benefitted from a number of people and institutions for which I would personally like to express my gratitude.

First of all I wish to thank my promotor, Eric Bergshoeff. I have very much enjoyed working with you. You have been of great influence to my career and I strongly acknowledge your help in finding opportunities for me to speak at international conferences as well as for the collaborations that you set up. I have learned a great deal from you; not only about physics but also about the ‘world of physics’.

The financial support from the University of Groningen enabled me to attend schools and conferences and to go on work visits for which I express my gratitude.

I thank the members of the reading committee: Philip Argyres, Dmitri Sorokin and Radu Tatar for taking the time to read the manuscript and for their useful comments.

I wish to thank Tomás Ortín. My first visit to Madrid in December 2005 has made a very nice and warm impression on me. Also, I would like to thank you for enabling me to come to Madrid again for a period of three months. I have enjoyed our collaborations. Here, I also like to thank the Instituto de Física Teórica of the Universidad Autónoma in Madrid for its financial support during my stay in Madrid.

Further, I wish to thank my collaborator Dmitri Sorokin. It was a great pleasure to work with you on the subject that you coined Q-branes. I have very much enjoyed our meetings at conferences, in Padova and in Groningen.

Many thanks also extend towards my collaborators Mechthild Hübscher, André Ploegh, Diederik Roest, Jan Rosseel, Dieter Van den Bleeken, Thomas Van Riet and Dennis Westra. Dennis, I appreciate the time you took to construct a latex framework for writing a thesis. Meggi and Patrick, thank you for the great working atmosphere in Madrid.

At the Institute for Theoretical Physics in Groningen I further express my gratitude towards Mees de Roo for the nice way in which you (together with Eric) lead the High Energy Physics Group. Furthermore, I would like to thank my colleagues Wissam Chemissany, Andrés Collinucci, Martijn Eenink, Olaf Hohm, Sven Kerstan

and Teake Nutma for the many interesting discussions about physics. Many thanks also extend to the secretaries Ynske Joustra, Iris de Roo-Kwant en Sietske Rob for their administrative support.

Tot slot wil ik graag nog de volgende mensen bedanken. Amir en Lex, hartelijk dank dat jullie mijn paranimfen wilden zijn en Amir dank voor je prachtige omslagontwerp. Pap en mam, ook jullie wil ik graag zeer bedanken voor jullie steun en advies.

Xue, ik draag deze thesis aan je op uit dank voor al wat je me geleerd hebt, voor je steun en voor je liefde.
