with N-octanoyl dopamine preconditioning:
With emphasis on lung and kidney grafts**

PhD thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. E. Sterken
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on

Monday 13 January 2015 at 11.00 hours

by

Christina Maximilia Valentina Hottenrott

born on 30 September 1983
in Frankfurt am Main, Germany

Supervisors

Prof. Dr. H.G.D. Leuvenink

Prof. Dr. B.A. Yard

Prof. Dr. M.A. Mariani

Co-Supervisor

Dr. M.E. Erasmus

Assessment committee

Prof. Dr. H.A.M. Kerstjens

Prof. Dr. J.L. Hillebrands

Prof. Dr. H.-P. Hammes

Table of contents

Introduction		9
Chapter 1	N-octanoyl dopamine is an agonist at the capsaicin receptor TRPV1 and mitigates ischemia-induced acute kidney injury in rat	29
Chapter 2	Dopamine and lipophilic derivatives protect cardiomyocytes against cold preservation injury	53
Chapter 3	N-octanoyl dopamine inhibits the expression of a subset of κ B regulated genes: potential role of p65 Ser276 phosphorylation	71
Chapter 4	Brain dead donor preconditioning with N-octanoyl dopamine to attenuate ischemia/ reperfusion injury in a rat lung transplantation model	95
Chapter 5	Open lung approach with low tidal volume mechanical ventilation attenuates lung injury in rats with massive brain damage	111
Chapter 6	Influence of ventilation strategies on gene expression profiles in kidneys from brain dead donor rats	131
Chapter 7	Quality of donor lungs: A comparative study between explosive and gradual brain death induction models in rats	153
Chapter 8	Slow brain death induction leads to more pronounced donor kidney and liver deterioration than a fast induction model	169
Chapter 9	Summary, discussion and future perspectives	189
Chapter 10	Nederlandse samenvatting	213
Appendix	Acknowledgments	217
