# Acknowledgments

I am particularly grateful to my supervisor Prof. Dr. R.H. Sanders. Thank you for teaching me the basis of gas dynamics and computational fluid dynamics. I also like to thank his family for accepting that in the last year he spent so much time on my thesis, especially at home.

The Egyptian government has offered a scholarship for carrying out this research in the Netherlands. I am very grateful to them and thank the culture office of the Egyptian embassy in Berlin who administered the scholarship.

I thank the reading committee, Prof. Dr A.G. de Bruijn, Prof. Dr. S. Zaroubi and Prof. Dr. M. Spaans for reading and approving this work, and in particular Prof. Dr. S. Zaroubi for his feedback in the last stages of writing the thesis. I am grateful to the Kapteyn Astronomical Institute for its hospitality and support during the past five years. Many thanks for Prof. Dr. Rien van de Weijgaert for his useful advice and discussion; he is an important guide for me. I thank Gijs Verdoes Kleijn and John Macfarland for proof reading chapter 6. I thank Roelof Bottema and Thijs van der Hulst for translating the English summary into well readable Dutch.

I have stayed three months at the Max-Planck-Institut für Extraterrestrische Physik to learn the reduction of X-ray data (XMM-Newton observatory). In particular I like to thank Prof. Dr. Hans Böhringer and Prof. Dr. Alexis Finoguenov for useful discussions and for their hospitality.

Thanks to several people at the Kapteyn Institute: Greta, Jackie, Gineke, Hennie, Wim, Eite, Martin and George. They always do a nice job with very wonderful smiles. They made me feel as if I and my family lived in our own country. Many thanks to all my colleagues at the Kapteyn Institute. It is a very good place to do science and develop good relationships.

Finally many thanks to my Egyptian friends in Netherlands particularly Mr. Gouda Sallam and his all family who helped me to discover the Netherlands and for their generosity. My wife 'Hedeya' was very patient with me, I like to thank her very much.

I have used FLASH code for my hydrodynamics simulations. The FLASH code was in part developed by DOE-supported ASC/Alliance Center for Astrophysical Thermonuclear Flashes at the University of Chicago. I acknowledge their work for that code which can handle very difficult problems in astrophysics with an adaptive mesh technique.

**My most sincere thanks for all of you**

*Nasser Mohamed Ahmed Mohamed*
