Acknowledgements

Nothing is ever accomplished without the help and support from others, this thesis and the past four years in general are no exception to that. I want to thank everybody who, willingly and perhaps also unwillingly, was part of my PhD time and made this all possible.

First and foremost I want to thank Sjoerd Harder for being my PhD supervisor. For your support, guiding, teaching, and the many discussions about research and life. Thank you for being willing to listen and talk even though I didn't always agree with you and for the freedom that you gave me to develop the project and try new ideas. More than anything thank you for not giving up on me during the final stages of writing when the end of the road proved to be (too) long.

I would also like to thank professors W. Brown, A. Minnaard and R. Anwander for reading my thesis, providing suggestions, and approving it.

I am very grateful to Marc Stuart for all the help with the TEM experiments that resulted in a publication and Chapter Two. Thank you for being willing to think outside the box and work with very air sensitive materials in an innovative way.

None of the research would have been possible without the funding from the DPI. I am grateful for this and for the people who provided feedback and suggestions: J. Severn, J. Walzer, B. Richter, J. Stamhuis, and N. Friedrichs, amongst others. I also very much enjoyed the progress meetings and the people I met during them: Camille, Fabian, *Mariët*, Mohammed, Suzy, and the many others.

From my time in Groningen, I am grateful for the good working atmosphere and very nice colleagues. Julia, thank you for welcoming me into the lab, for teaching me new techniques, and for your friendship ever since. Thanks to Edwin, Oetze, Niels, Raquel, Mu-Chieh, Peter, Douwe, Marco, and Joost for the pleasant working atmosphere, fruitful discussions and many good times.

Cédric, we have shared the same project for three years. It wasn't always working well but in the end I think it has been a worthwhile and fun adventure. Thank you for your help, advice, support, and friendship.

Johanne, if hope didn't die last I don't think I would have made it this far. Thank you for always being up to organize or undertake whatever comes to mind. Your words of support and jokes have helped me during hard times and I will never forget all the crazy and exciting adventures.

Jessica, although you didn't stay until the end you have also been a big part of this work. Thank you for your company, the troubles you endured while moving around with me, and for proofreading my thesis to ensure somewhat proper English.

When moving to Erlangen I met again a wide variety of new people. I am thankful to Ursula, Carlos, and Christian for helping us set up the lab and guiding us through all the administrative work when we arrived. Thanks also to Jochen and Achim for NMR and Frank for the help and teachings about crystallography. Brant, Holger, Gerd, Xian, Markus, Magnus, Heiko, Thomas, Jürgen, Tom, Andrea, Christina, and Christian, thank you all for the good working atmosphere in the lab, help with anything that needed and for the many, many nice beer sessions, barbecues, and coffee breaks.

Special thanks to Friday for all the nice squash sessions, although sometimes it was hard to wash out all the sand I really appreciated it and enjoyed it a lot.

During my time in Groningen and in Erlangen I had a chance to work with many students. You all have inspired me and motivated me to continue research and finish the thesis. Joost, Stephan, Tim, Cornelius, David, Sebastian, Johannes, Sascha, Christian, Christina, Johannes, Sarah, Kirsten, Matze, Philipp, Ruth, Carolin, Sami, Sibelle, Tabea, Julia, Christina, and Johannes, thank you for your contributions and the time that you committed. Although the projects were often short I always enjoyed working together with y'all.

I had the pleasure to work for longer periods of time with Sebastian, Martin, Verena, and Alex. All of you have really made an impact on this work and parts of your research is included in Chapters Three, Four, and Five. I very much enjoyed working with all of you and learned a lot. I wish you all the best with your PhD's in different groups. Thanks!

I also wish to thank the rest of the inorganic chemistry department in Erlangen. I had many good times teaching lab, playing laser tag, and drinking beer with the Burzlaff group. Sascha, Tobias, Philipp, Suzy, Lisa, Eva, Nico, Frank, Julia, and the rest. It was a pleasure!

For all the good company during the Friday beers and parties I also thank the members of the Meijer group: Rosy, Dominik, Pete, and the rest. Hörx, thanks for all the good times outside the lab. Hiking, princesses and the weinfest (including Martin, Josi, and all other people involved). I had a blast.

Although it was sometimes limited during the last four years there was also a part of my life that took place outside the lab. It made research bearable, provided me with an outlet, and allowed me to focus my mind on something else. Your stories, memories and contributions to my life are too much to all describe here but they will always be remembered by me. Stefan, Bart, Peter, Gerbert, Rutger, Christoph, Bhrigue, Angela, Erin, the Bremer family, Siemens cycling, Cindy, George (3x), Adrienne, Paul, Joseph, Wyatt, Temple, Conner, Chris, Nick, Ryan, Geoffrey, Isiah, and Jones. Thank you!

Last but not least, I would like to thank my family for the support and believe in me. For the many nice and refreshing visits, thank you!

I am sure I have forgotten many people that I have encountered during my PhD and that have influenced and affected me. For all of you (and for those that feel they should have been acknowledged more thoroughly) thank you, thank you very much.
