Acknowledgements

I would first like to thank my supervisors for the enormous help they have provided me during all these years. I thank Marius for his time and dedication. I have learned a lot of mathematics from him. I am indebted to Jaap for his enthusiasm in my project and for giving me so much of his time. I would also like to thank Jan for teaching me about the history of mathematics and for his constant personal support.

I am also grateful to my colleagues from the department for their company, and to all the friends that I have met in The Netherlands for having helped me in some way or another. My special thanks to my parents, for the time and energy dedicated. To Andrea and her family, for their friendship and the time spent together. To Cris, for being proud of me. To my paranymphs Lenny and Diego, for suffering my bad mood and still remain my friends. To Naiara, for her enthusiasm in mathematics and in life.

To Jon, who has gone through every page of this thesis so many times. Thanks for being there in every way.

To Pablo, for his smiles, his songs, and everything else.
