Fundamental limits of NO formation in fuel-rich premixed methane-air flames

Vincent Martijn van Essen

The work described in this thesis was performed in the Laboratory for Fuel and Combustion Science at the University of Groningen, Nijenborgh 4, 9747 AG Groningen, the Netherlands. This research was financially supported by the Dutch Technology Foundation STW (GPC.5480).

V.M. van Essen,

Fundamental limits of NO formation in fuel-rich premixed methane-air flames,

Proefschrift Rijksuniversiteit Groningen (2007)

TABLE OF CONTENTS

Introduction.....	1
Scope of this thesis.....	2

Chapter 1: NO formation and destruction in laminar premixed hydrocarbon flames

1.1 Chemistry and physics of flat laminar premixed methane-air flames	6
1.1.1 Flat laminar premixed flames	6
1.1.2 Conservation equations for an one-dimensional steady laminar premixed flame	9
1.1.3 Chemical production rate, R_i	11
1.2 Mechanisms of nitric oxide formation	13
1.2.1 Zeldovich or thermal mechanism	13
1.2.2 Fenimore mechanism	17
1.2.3 Other NO formation mechanisms	21
1.3 Nitric oxide emission reduction by flue-gas recirculation and upstream heat-loss in fuel-rich premixed flames	22
1.3.1 Upstream heat-loss.....	23
1.3.2 Flue-gas recirculation.....	25
1.4 Studies of NO formation in low-pressure flames	26

Chapter 2: Experimental setup for studying low-pressure flames

2.1 Gas handling system.....	32
2.2 Low-pressure combustion chamber	34
2.3 Testing the low-pressure setup.....	37

Chapter 3: Laser-induced fluorescence in low-pressure flames

3.1 Introduction.....	44
3.2 General theory of linear LIF	45
3.2.1 LIF excitation spectra for OH, CH and NO	50
3.2.2 Concentration determination in a flame.....	52
3.2.3 LIF thermometry.....	53

3.2.4 Determination of quenching rate (Q_u).....	56
3.3 Experimental setup	57
3.3.1 Laser systems.....	57
3.3.2 Detection system.....	58
3.4 Reference flame measurements	59
3.4.1 Experimental LIF-spectra and linearity check	59
3.4.2. Quenching rate measurements.....	64
3.4.3 Temperature measurements.....	67
3.4.4 CH and OH concentration measurements using Rayleigh scattering	69
3.4.5 NO concentration in reference flame.....	75

Chapter 4: The Effects of Burner Stabilization on Fenimore NO Formation in Low-Pressure, Fuel-Rich Premixed CH₄/O₂/N₂ Flames

4.1 Introduction.....	82
4.2 Experimental details	82
4.3 Results and discussion.....	83
4.3.1 Temperature and OH profiles.....	83
4.3.2 CH and NO profiles	85
4.3.3 Effects of burner stabilization	89
4.3.4 Variation in equivalence ratio	89
4.3.5 Comparison with model predictions.....	91
4.4 Summary and Conclusions	92

Chapter 5: The Effects of Flue-gas Recirculation on Fenimore NO Formation in Low- Pressure, Fuel-Rich Premixed CH₄/O₂/N₂ Flames

5.1 Introduction.....	96
5.2 Experimental details	97
5.3 Temperature and OH profiles	98
5.4 CH and NO profiles.....	101
5.5 Comparison between FGR and burner stabilization	103
5.6 Comparison between ‘wet’ and dry FGR.....	104
5.7 Consequences for practical systems.....	107
5.8 Conclusions.....	109

Chapter 6: A LIF study of the effect of pressure on NO formation in premixed methane flames

6.1 Introduction.....	114
6.2 Experimental details.....	115
6.3 Results and discussion.....	116
6.3.1 Temperature and species concentration measurements.....	116
6.3.2 Pressure dependence of NO formation.....	119
6.3.3 Comparison with model predictions.....	122
6.4 Conclusions.....	123
Summary	127
Samenvatting	131
Dankwoord	135
