Dynamic Combinatorial and Protein-Templated Click Chemistry in Medicinal Chemistry

Milon Mondal

Ph.D Thesis

University of Groningen, The Netherlands

The research described in this thesis was carried out within the Stratingh Institute for Chemistry, University of Groningen, The Netherlands.

In compliance with the requirements of the Graduate School of Science of the Faculty of Mathematics and Natural Sciences, University of Groningen, The Netherlands.

This work was financially supported by the University of Groningen and the Netherlands Organisation for Scientific Research (NWO).

The cover was designed by Milon Mondal and Jonas Lohse.

Printed by Ipskamp Printing BV, Enschede, The Netherlands.

Dynamic Combinatorial and Protein- Templated Click Chemistry in Medicinal Chemistry

PhD Thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. E. Sterken
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on

Friday 12 February 2016 at 12.45 hours

by

Milon Mondal

born on 5 March 1988
in Swarupnagar, India

Supervisors

Prof. A.K.H. Hirsch

Prof. A.J. Minnaard

Assessment committee

Prof. A.S.S. Dömling

Prof. J.G. Roelfes

Prof. C. Schofield

Ma and Baba (my parents)

Table of contents

Chapter 1. Dynamic Combinatorial Chemistry: a Tool to Facilitate the Identification of Inhibitors for Protein Targets	1
1.1 Structure-based drug design	2
1.2 Fragment-based drug design	5
1.3 Dynamic combinatorial chemistry	6
1.3.1 General features of DCC applied to protein targets	7
1.3.2 Reversible covalent bond formation for protein targets	9
1.3.2.1 C=N bond formation	9
1.3.2.1.1 Imine formation	9
1.3.2.1.2 Hydrazone formation	11
1.3.2.1.3 Acylhydrazone formation	13
1.3.2.2 C-C bond formation: Alkene cross metathesis	16
1.3.2.3 C-S bond formation	18
1.3.2.3.1 Hemithioacetal formation	18
1.3.2.3.1 Thioether formation	20
1.3.2.4 S-S bond formation: Disulfide-bond formation	23
1.3.2.5 B-O bond formation: Boronate ester formation	25
1.4 Aspartic proteases	28
1.4.1 Endothiapepsin	29
1.5 Strategic combinations	30
1.5.1 Overview	32
1.6 References	32

Chapter 2.	Structure-Based Drug Design of Inhibitors of the Aspartic Protease Endothiapepsin by Exploiting Dynamic Combinatorial Chemistry	39
2.1	Introduction	40
2.2	Results and discussion	40
2.2.1	De novo structure-based design	40
2.2.2	Synthesis of building blocks	42
2.2.3	Formation and analysis of DCLs using ¹ H-STD-NMR	43
2.2.4	Synthesis of identified acylhydrazones	46
2.2.5	Biochemical evaluation	47
2.2.6	X-ray crystallography	48
2.3	Conclusions	51
2.4	Experimental section	51
2.4.1	General procedure for the formation and analysis of the DCLs	51
	¹ H-STD-NMR	52
2.4.2	Fluorescence-based inhibition assay	52
2.4.3	Modeling and Docking	53
2.4.4	Crystallization, data collection and processing	53
2.4.5	General Experimental Details	54
2.4.6	Synthesis of the monomers	55
2.4.6.1	General procedure for hydrazide formation to form the corresponding methyl ester (GP1)	55
2.4.6.2	General procedure for acylhydrazone formation (GP2)	57
2.5	References	62

Chapter 3.	Fragment Linking and Optimization of Inhibitors of the Aspartic Protease Endothiapepsin: Fragment-Based Drug Design Facilitated by Dynamic Combinatorial Chemistry	65
3.1	Introduction	66
3.2	Results and Discussion	67
3.2.1	Fragment-based drug design	67
3.2.2	Synthesis of building blocks	69
3.2.3	Formation and analysis of DCLs using LC-MS	69
3.2.4	Synthesis of identified bis-acylhydrazones	72
3.2.5	Biochemical evaluation	73
3.2.6	X-ray crystallography	74
3.3	Conclusions	75
3.4	Experimental Section	76
3.4.1	General procedure for the formation and analysis of the DCLs	76
	HPLC conditions	76
3.4.2	Fluorescence-based inhibition assay	77
3.4.3	Modeling studies	77
3.4.4	Experimental Procedures	77
3.4.4.1	General Experimental Details	77
3.4.4.2	Synthesis of the Hydrazides	77
3.5	References	80
Chapter 4.	Structure-Based Optimization of Inhibitors of the Aspartic Protease Endothiapepsin	83
4.1	Introduction	84
4.2	Results and Discussion	84
4.2.1	Structure-based drug design	84
4.2.2	Synthesis of Acylhydrazone derivatives	87

4.2.3	Biochemical evaluation	87
4.2.4	Discussion	89
4.3	Conclusions	91
4.4	Experimental Section	91
4.4.1	Fluorescence-based inhibition assay	91
4.4.2	Modeling and Docking	91
4.4.3	General experimental details	91
4.4.4	Synthesis	91
4.5	References	96
 Chapter 5. Fragment Growing Exploiting Dynamic Combinatorial Chemistry of Inhibitors of the Aspartic Protease Endothiapepsin		99
5.1	Introduction	100
5.2	Results and Discussion	100
5.2.1	FBDD: fragment growing	100
5.2.2	Synthesis of building blocks	102
5.2.3	Formation and analysis of DCL	102
5.2.4	Synthesis and biochemical evaluation of identified acylhydrazones	105
5.3	Conclusions	107
5.4	Experimental Section	107
5.4.1	Fluorescence-based assay for DCL screening	107
5.4.2	Fluorescence-based inhibition assay	108
5.4.3	Modeling and Docking	108
5.4.4	General experimental details	108
5.4.5	Synthesis	108
5.5	References	112

Chapter 6. Fragment-Based Drug Design Facilitated by Protein-Templated Click Chemistry: Fragment Linking and Optimization of Inhibitors of the Aspartic Protease Endothiapepsin	115
6.1 Introduction	116
6.2 Results and discussion	118
6.2.1 Fragment-based drug design	118
6.2.2 Synthesis of building blocks (azides and alkynes)	119
6.2.3 Generation of library	121
6.2.4 Synthesis of identified triazoles	123
6.2.5 Biochemical evaluation	125
6.2.6 Discussion	126
6.3 Conclusions	128
6.4 Experimental Section	128
6.4.1 PTCC experiments	128
6.4.2 Fluorescence-based inhibition assay	130
6.4.3 Modeling and Docking	130
6.4.4 General experimental details	130
6.4.5 Synthesis of azides, alkynes and triazoles	130
6.4.6 General procedure for azide synthesis	130
6.5 References	136
Conclusions and Perspectives	139
7.1 Introduction	140
7.2 Research overview	141
7.3 Perspectives	143
Samevatting	147
Acknowledgments	151
