Light-Controlled Conductance Using Molecular Switches

Photochromic Switches Get Wired

Tibor Kudernáč

The work described in this thesis was carried out at the Department of Organic and Molecular Inorganic Chemistry, Stratingh Institute for Chemistry, University of Groningen, The Netherlands and the Physics of Nanodevices Group, University of Groningen, The Netherlands.

This work is part of the research programme of the 'Stichting voor Fundamenteel Onderzoek der Materie (FOM)', which is financially supported by the 'Nederlandse Organisatie voor Wetenschappelijk Onderzoek (NWO)'.

Printed by: PrintPartners Ipskamp B.V., Enschede, The Netherlands.

Cover design by Marlène Perronet.

Contents

Chapter 1	Introduction: Light-induced switching of conductance in molecular systems	
1.1	Introduction	2
1.2	Main Classes of Photochromic Switches	3
1.3	Electrochemical Read-Out Following Photochemistry in Solution	5
1.4	Electrochemical Read-Out Following Photochemistry on Surfaces	8
1.5	Photochromism on Metallic Nanoparticles	9
1.6	Light Switching of Conductance of Individual Molecules and Monolayers	13
1.7	Switching Devices Based on Photochromic Molecules	17
1.8	Conclusions and Contents of this Thesis	19
1.9	References and Notes	21
Chapter 2	One –Way Conductance Switching of Single Photochromic Molecules connected to Gold Electrodes	
2.1	Introduction	26
2.2	Synthesis and Photochromic Properties of Novel Thiol Terminated Diarylethene Compounds	28
2.3	Mechanically Controlled Break-Junction Experiment	30
2.4	STM Experiments	33
2.4.1	Stochastic switching	35
2.4.2	Photochromic switching	38
2.5	The Origin of Irreversibility	40
2.6	Conclusions	42
2.7	Experimental Section	42
2.8	References and Notes	47
Chapter 3	Synthesis and Photochromic Properties of New Thiol-Terminated Diarylethenes; Temperature Dependence of the Switching Process	
3.1	Introduction	52
3.2	Synthesis of Thiol Terminated Diarylethenes	55
3.3	Room Temperature Photochromic Properties of Diarylethenes	60
3.3.1	Absorption Spectra and Photochemical Interconversion of Open and Closed Forms	60
3.3.2	Fatigue Resistance	62
3.4	Temperature Dependence of Diarylethene Photochromism	64
3.4.1	Ring-Closure Kinetics	65

3.4.2	Ring-Opening Kinetics	66
3.4.3	Activation Energy Barrier	67
3.5	Conclusions	70
3.6	Experimental Section	71
3.7	References and Notes	81
Chapter 4	Photo- and Electrochemical Properties of SAMs of Diarylethenes on Gold: Nanoparticles and Bulk Electrodes	
4.1	Introduction	86
4.2	SAMs of Diarylethenes on Gold Nanoparticles	87
4.2.1	Introduction to Gold Nanoparticles	87
4.2.2	Concept for Fast Screening of Photochromic Behavior of Diarylethenes Anchored on Gold Using Gold Nanoparticles	90
4.2.3	Synthesis of Diarylethene Functionalized Gold Nanoparticles	92
4.2.4	Transmission Electron Microscopy of Diarylethene Functionalized Gold Nanoparticles	93
4.2.5	IR-Characterization of Organic Shell Encapsulating Nanoparticles	94
4.2.6	Photochromic Behavior of Surface Bound Diarylethenes on Gold Nanoparticles	95
4.3	SAMs of Diarylethenes on Bulk Gold Electrodes	98
4.3.1	Introduction	98
4.3.2	Cyclic Voltammetry: Principles and Setups	99
4.3.3	Cyclic Voltammetry and Electrochemical Switching of Diarylethenes in Solution	103
4.3.4	Electrochemically Driven Switching of 6o and 6c SAMs	105
4.3.5	Electrochemical and Photochemical Opening of 36c SAMs.	106
4.3.6	Electrochemical and photochemical switching of 21o and 21c SAMs.	111
4.3.7	Discussion	113
4.4	Conclusions	114
4.5	Experimental Section	115
4.6	References and Notes	117
Chapter 5	Reversible Light-Induced Single Molecule Conductance Switching on Gold	
5.1	Introduction	124
5.2	Optical Switching of Homogeneous Monolayer on Gold	125

5.2.1	XPS Characterization of Monolayers	127
5.2.2	Optical Switching of Monolayer Monitored by UV-Vis Spectroscopy	128
5.3	Conductance Switching of Single Molecules	129
5.3.1	STM Characterization of Mixed Monolayer	130
5.3.2	Observation and Switching of Single Molecule	131
5.3.3	Statistical Analysis of Multiple Single Molecule Switching Events	132
5.3.4	Comment on Possible Temperature Effects	134
5.4	Conclusions	135
5.5	Experimental Section	136
5.6	References and Notes	139

Chapter 6 Intermolecular Repulsion through Interfacial Attraction: Polymorphism in Self-Assembled Monolayers

6.1	Introduction	144
6.2	Scanning Tunneling Microscopy (STM) at the Liquid/Solid Interface	146
6.2.1	The Tunneling Effect, a Short Introduction	146
6.2.2	STM: the Experimental Setup	147
6.2.3	STM of Molecular Monolayers at the Liquid/Solid Interface	148
6.2.4	Description of the Solvent	149
6.2.5	Description of the Substrates	149
6.3	Synthesis of PHB	151
6.4	Columnar Packing on HOPG	152
6.5	Polymorphism on Au(111)	153
6.6	Origin of Polymorphism on Au(111): Driving Force for Dimer Formation	156
6.7	Possible Influence of Geometrical Factors: Self-Assembly on MoS ₂ and C50/HOPG	159
6.8	Conclusions	161
6.9	Experimental Section	162
6.10	References and Notes	163
