RIJKSUNIVERSITEIT GRONINGEN

# Combining the Incompatible

Inulin glass dispersions for  
fast dissolution, stabilization and formulation of  
lipophilic drugs

Proefschrift

ter verkrijging van het doctoraat in de  
Wiskunde en Natuurwetenschappen  
aan de Rijksuniversiteit Groningen  
op gezag van de  
Rector Magnificus, dr. F. Zwarts,  
in het openbaar te verdedigen op  
vrijdag 28 april 2006  
om 14:45 uur

door

Dirk Jan van Drooge  
geboren op 25 april 1975  
te Leeuwarden

## Table of contents

Chapter 1	Introduction: Production, stability, and dissolution of solid dispersions to improve the bioavailability of class II lipophilic drugs. <i>The introduction gives an extensive overview of strategies and challenges for poorly soluble drugs. The challenges that are outlined here are addressed in chapters 2-7.</i>	6
Chapter 2	Incorporation of lipophilic drugs in sugar glasses by lyophilization using a mixture of water and tertiary butyl alcohol as solvent <i>Describes the method of preparation of the sugar glass dispersions that are investigated in this thesis. Furthermore, physical stability and residual solvent is discussed.</i>	43
Chapter 3	Anomalous dissolution behaviour of tablets prepared from sugar glass based solid dispersions <i>Describes the mechanisms that affect drug dissolution rate from solid dispersions</i>	63
Chapter 4	Characterization of the molecular distribution of drugs in glassy solid dispersions at the nano-meter scale, using differential scanning calorimetry and gravimetric water vapour sorption techniques <i>Development of methods to characterize non-crystalline intimately mixed binary solids.</i>	79

Chapter 5	Characterization of the mode of incorporation of lipophilic compounds in solid dispersions at the nano-scale using Fluorescence Resonance Energy Transfer (FRET) <i>Describes the application of FRET to develop a sensitive characterization technique for amorphous solid dispersions</i>	99
Chapter 6	Solid dispersions based on inulin for the stabilization and formulation of $\Delta^9$ -tetrahydrocannabinol <i>Shows how an unstable molecule is protected against oxidation using sugar glass technology and how sugar glasses can be applied in a tablet for sublingual administration</i>	111
Chapter 7	Spray freeze drying to produce a stable $\Delta^9$ -tetrahydrocannabinol containing inulin-based solid dispersion powder suitable for inhalation <i>Assesses differences between freeze drying and spray freeze drying and shows that spray freeze drying yields stable sugar glass dispersion particles that are suitable for dry powder inhalation</i>	127
Chapter 8	Concluding Remarks and Perspectives	143
Chapter 9	Summary	149
Appendix 1	Bibliography	153
Appendix 2	Nederlandse samenvatting	169
Appendix 3	List of publications and patents	175
Appendix 4	Dankwoord	177
