Acknowledgements

Writing the acknowledgments section means that I have come to the end of writing my thesis and this is a great relief. I really enjoyed my time at the University of Groningen; working on my PhD has taught me a lot as a scientist and it also taught me a lot about myself. I could have never done it without the help of the people around me, both professionally and personally. I would therefore like to thank the people that have contributed to my research and thesis, as well as the people that supported me during my PhD. I would never be where I am today without all of your trust and patience.

First of all, I would like to thank my promotors: prof. dr. Rainer Bischoff, prof. dr. Nico van de Merbel and prof. dr. Wim Quax. Rainer, thank you for offering me a PhD position and for your guidance during these past years. Your supervision and your helpful ideas shaped my research. Also, thank you for your help with writing my thesis. My language skills may sometimes have given you a headache, as they did me, but besides that I think that we can be proud of the final results of our research. Nico, you really helped me a lot with all of your knowledge about the industry, which also benefits me a lot in my new job. You were always truly interested in what I was working on. I really appreciate that you always came by my office to check on me and to have great discussions with me. Wim, thank you for always taking the time to attend our meetings. I know that you have a busy schedule being the Dean of our faculty, so it meant a lot to me. I learned a lot from you about the biological and clinical aspects of TRAIL.

I would like to thank the members of my assessment committee: prof. dr. H.W. Frijlink, prof. dr. G.W. Somsen and prof. Dr. H. Schlüter. Thank you for taking the time to read and evaluate my manuscript and for agreeing to participate in the defense ceremony.

Also, I would like to gratefully acknowledge the Dutch Technology Foundation (STW) for their financial support. Further financial support was provided by PRA Health Sciences, Spark Holland, Merck Sharp & Dohme, Bioscience, Beckman Coulter Inc. and Bionavis. Without your support, it would not have been possible to conduct this research.

My thanks go out to all the people involved in the STW project “Innovative analytical methodologies for biopharmaceuticals”. I was fortunate enough to participate in this project and your expertise and the discussions during our 3-monthly meetings helped me grow as a scientist. I would like to thank the academic partners of the Vrije Universiteit of Amsterdam and the University of Utrecht: prof. dr. Wilfried Niessen, prof. dr. Govert Somsen, prof. dr. Ad de Jong, prof. dr. Martine Smit, dr. Jeroen Kool, dr. Elena Dominguez, dr. Rob Haselberg, Marija Mladic and Jordy van Angeren. I also want to express my thanks to the industry partners: dr. Bert Ooms, dr. Eef Dirksen, dr. Maurice Selman, dr. Egbert Mueller, dr. Janusz Sadowski, dr. Jussi Tuppurainen, dr. Raymond van den Bergh, dr. Jeff Chapman, dr. Andras Guttman, dr. Karsten Hendriks, dr. Kirsten Ampt and Cora Heesakkers.

I am sincerely grateful for the help of dr. Carlos dos Reis and dr. Ingrid van Roosmalen. I learned a lot from you both about the biology behind TRAIL, which was very useful to me. I would also like to thank my daily supervisors, Jos Hermans and Natalia Govorukhina, for their day-to-day guidance. Jos, I am very grateful for your help with all the LC-MS equipment in the lab and the nice talks we had. Natalia, thank you for helping out with running the SDS-page gels and performing the western-blot analyses.

Regarding my research, I would also like to thank the students I supervised: Ikrame Mouch, Niels Alting and Angela Asselman. Angela, I would especially like to thank you for your hard work, your contributions to my research and your enthusiasm. I wish you all the best in your future career. Also, thanks to Riccardo Donzelli for all of your work in the lab and for taking the time to contribute to my research besides working on your own PhD. I wish you the best of luck with completing your PhD.

From the university medical center in Groningen, I would like to thank prof. dr. Steven de Jong, Tushar Tomar, dr. Nick ten Hacken and the department of pulmonology for the logistics and sample collection in the saliva and sputum experiments. My thanks of course also go out to the volunteers for their contributions.

Many thanks go out to my red-shoed paranymph Kees Bronsema. You have always been my research buddy since our projects shared a lot in common. You have taught me a lot as you are a very experienced and, in my opinion, highly talented scientist. I wish you all the best and I hope that you are entering a less busy period so you can enjoy spending more time with your family.

During the time that I performed my research, I was fortunate enough to work with a great group of colleagues. Turhan Gül, dr. Karin Wolters, Peter Bults, Frank Klont, Andres Gil, Tao (Larry) Zhang, Tao Yuan, dr. Sarah Camacho, dr. Alexander Boichenko, dr. David Siegel, dr. Hjalmar Permentier, Jan Willem Meints, prof. dr. Peter Horvatovich, Jolanda Meindersma, Marcel de Vries, Annie van Dam and Margot Jeronimus-Stratingh. It has always been a pleasure to work with all of you and I would really like to thank you for this, not only for all of your kind help but also for the fun we had during and outside of office hours. Looking back on our movie-and-pizza night, our go-karting adventure, soccer night on the big screen and our intercultural Christmas dinner always brings a smile to my face!

Dear family and friends, I also thank you from the bottom of my heart for your love and support during my PhD. I know it has not always been easy for you, as I could not always give you my undivided attention during these last four years, since it takes a lot of work to complete a PhD project. Nevertheless, I hope that I have made you proud.

Special thanks go out to my father. I am very grateful for the fact that you have always been so interested in my work and that you always took the time to help me, inspire me and motivate me. Since we practically worked in the same building, we were fortunate enough to be able to have weekly lunches. The discussions we had during these lunches, as well as on other occasions, have always been very helpful and felt quite homey to me. I hope we will continue this tradition now that I have started my new job at QPS, which is also close by!

Lastly, I have to thank Maaike. My love, thank you so much for having been so supportive all these years and for sympathizing with me. Sometimes it felt like you were even more anxious about my project than I was. It has not always been easy and we are so happy that my work has finally been completed. I love you very much, I am proud of you and I could not have done it without your help and support.
