Acknowledgments

Finishing a PhD project is the result of participation and collaboration of many persons. It starts with the development of the idea, the participation of experts in the survey and the collaboration with colleagues, scientists and promoters. But all this only have been possible with the blessings of God Almighty. Thanks to Allah (SWT).

My gratitude and appreciation to all the individuals, groups, institutes and organizations who contributed in this study directly or indirectly. I am thankful to the interviewees who participated in this study. They extended their kind cooperation and assistance in sparing their valuable time for interview. The interviewees provided useful information, discussed health issues and extended their traditional Pakistani hospitality during my visits to their offices, homes and public places.

I want to thank my promoters Prof. Dr. W.J.A. van den Heuvel, Prof. Dr. J.W. Groothoff and co-promoter Dr. J.P. van Dijk. Prof. Dr. Wim Van den Heuvel played an important role to realize the results as they are now, despite his academic and administrative activities being a Professor in the University of Groningen and Scientific Director of the research school CaRe, University of Maastricht, Managing Director Institute of Rehabilitation Research (IRV) Hoensbroek and International Consultancies. He was 'een drukke baas', but always there in extending his guidance and discussing the scientific matters.

I appreciated the comments and support of the promotion committee: Prof. Dr. E. de Leeuw, Prof. Dr. J. Groothoff and Prof. Dr. H. Philipsen, which contributed to the quality of the thesis. Thank you.

I am happy to thank my colleagues and friends at the National Center for Rural Development, Ministry of Environment, Local Government and Rural Development, Islamabad, Pakistan, Faculty of Health Sciences, the University of Maastricht, Netherlands, Institute of Rehabilitation Research, Hoensbroek, Netherlands and the Faculty of Medical Sciences, the University of Groningen, Netherlands. They all contributed a lot in the completion of this work. They encouraged me to complete this work, provided moral support in difficult times and built a positive hope that became a reality at the end. My words are helpless to extend my thanks particularly for those who helped me in difficult times and tried to keep the stress away from in the years 2003-04.

During my stay in the University of Maastricht (1995-2004) I worked as a lecturer in the Maastricht School of Public Health and performed various activities as a tutor, unit coordinator and research supervisor of students attending Master of Public Health (MPH) study program. Working with MPH students from different countries provided a wonderful opportunity in sharing knowledge and experience, knowing different cultures, understanding various socio-cultural values and in learning the art of thinking globally and acting locally in promoting health.

I am happy to extend my gratitude to my loving mother and all the family members and friends in Pakistan, Belgium, Netherlands, Saudi Arabia and UK. I really appreciate their kind cooperation, love and affection that helped me in overcoming my problems, acting with patience and sustaining my research process.
