Device physics of polymer:fullerene bulk heterojunction solar cells

Proefschrift

ter verkrijging van de graad van doctor aan de
 Rijksuniversiteit Groningen
 op gezag van de
 rector magnificus prof. dr. E. Sterken
 en volgens besluit van het College voor Promoties.

De openbare verdediging zal plaatsvinden op

vrijdag 26 februari 2016 om 11.00 uur

door

Davide Bartesaghi

geboren op 8 januari 1987
 te Carate Brianza, Italië

Promotor

Prof. dr. M. A. Loi

Co-promotor

Dr. L. J. A. Koster

Beoordelingscommissie

Prof. dr. V. Dyakonov

Prof. dr. J. C. Hummelen

Prof. dr. ir. R. A. J. Janssen

CONTENTS

1	Introduction to organic solar cells	1
1.1	Solar energy	2
1.2	Solar cell efficiency	2
1.3	Organic semiconductors	3
1.4	Organic photovoltaic devices	5
1.4.1	Generation of free charges	7
1.4.2	Charge transport	7
1.4.3	Charge recombination	9
1.5	The influence of the morphology	10
1.6	Fabrication and characterization of the devices	11
1.6.1	Solar cells	11
1.6.2	Single carrier devices	12
1.6.3	Current-voltage characteristics	12
1.7	Modelling of BHJ devices	13
1.7.1	Details of drift-diffusion simulations	13
1.8	Outline of this thesis	16
2	Charge transport and recombination in PDPP5T:[70]PCBM solar cells	25
2.1	Introduction	26
2.2	PDPP5T:[70]PCBM solar cells: performance and morphology	27
2.3	Charge transport	30
2.3.1	Space charge limited current	30
2.3.2	Charge transport in PDPP5T:[70]PCBM blends	31
2.3.3	Thickness dependence of the electron mobility	32
2.4	Charge recombination	34

2.4.1	Reduced Langevin recombination in organic solar cells	34
2.4.2	Recombination strength in PDPP5T:[70]PCBM blends	34
2.5	Conclusion	36
3	Modelling the <i>JV</i> characteristics of PDPP5T:[70]PCBM solar cells	39
3.1	Introduction	40
3.2	Drift-diffusion modelling	40
3.2.1	1D drift-diffusion model	40
3.2.2	Morphology schematization	41
3.2.3	Local contributions to the total photocurrent	43
3.3	Optical modelling	44
3.4	Outcome of the simulations	45
3.4.1	Homogeneous devices	46
3.4.2	Phase-separated devices	49
3.5	Conclusion	51
4	Validation of the parallel model	55
4.1	Introduction	56
4.2	Modelling approach	57
4.2.1	Materials parameters	57
4.2.2	Three-dimensional numerical model	58
4.2.3	1D model and parallel approach	60
4.3	Outcome of the simulations	61
4.3.1	3D calculations	61
4.3.2	Parallel model	70
4.4	Conclusion	73
5	A figure of merit for the fill factor	79
5.1	Introduction	80
5.2	Drift-diffusion model and material parameters	81
5.3	Donor and acceptor materials	83
5.3.1	Polymer:fullerene solar cells	83
5.3.2	Polymer:polymer solar cells	83
5.3.3	Small molecule solar cells	84
5.4	Recombination and extraction rates	85
5.5	Results of the numerical simulations	87
5.5.1	Surface recombination and carrier density at the contacts	87
5.6	Experimental results	88
5.7	Discussion	96
5.8	Conclusion	98

6 UV-induced degradation of PTB7:[70]PCBM solar cells	103
6.1 Introduction	104
6.2 Results and discussion	105
6.2.1 Solar cells performance upon UV exposure	106
6.2.2 Charge transport	109
6.2.3 Trap-assisted recombination in PTB7:[70]PCBM solar cells	110
6.2.4 The role of [70]PCBM	111
6.3 Conclusion	113
Publications	119
Summary	121
Samenvatting	125
Acknowledgments	129
