Take-down policy

If you believe that this document breaches copyright please contact us providing details, and we will remove access to the work immediately and investigate your claim.

Downloaded from the University of Groningen/UMCG research database (Pure): <http://www.rug.nl/research/portal>. For technical reasons the number of authors shown on this cover page is limited to 10 maximum.

- Balance is paramount for the proper functioning of the cerebellum (this thesis)
- Climbing fibres are an essential aspect of the neuropathology of spinocerebellar ataxias (this thesis)
- A promising shared SCA mechanism is disturbed glutamate/Ca²⁺ signalling (this thesis)
- Mutations in the Dyn A domain of *PDYN* cause spinocerebellar ataxia type 23 via alterations in the secondary structure of the peptide (this thesis)
- Developmental abnormalities can contribute to neurodegeneration (this thesis)
- Identifying novel SCA genes will shed light onto the shared underlying molecular mechanisms of spinocerebellar ataxias (this thesis)
- Intellectual disability and spinocerebellar ataxia may be biologically more closely related than previously thought (this thesis)
- Any man could, if he were so inclined, be the sculptor of his own brain (Santiago Ramón y Cajal)
- Genius is simply patience carried to the extreme (Santiago Ramón y Cajal)
- All truths are easy to understand once you discover them, the point is to discover them (Galileo Galilei)
- I'm so clever, that sometimes I don't understand a single word of what I'm saying (Oscar Wilde)
